Hiring Team, Aidentifi

Your posting asks a simple question: how should an AI-native company actually operate. I have spent the last several months answering a version of that question inside my own company. At PriceKeel I designed a guardrail engine and audit trail that give Finance and Sales leadership one explainable system for every pricing decision, learned from each company's own closed-won and closed-lost deals, and I run the CRM, CPQ, pipeline reviews and deal approvals that sit on top of it, end to end, as the sole operator. That is the loop your CEO's Office role describes: operate the system day to day, then find where it breaks and make it better.

On the commercial side, at Sensata I built the FY2026 Bleeders and Leakers Power BI dashboard, scoring 1,200 pricing opportunities against a $627M target across 3 regions and 20 product lines, and used it to surface $433M in margin gaps as management information leadership could actually act on, not a report that just looked busy. I recovered $700K plus in margin in two quarters off that same dashboard by turning a data problem into a negotiated outcome with distributors and channel partners. Resource utilisation and client economics are numbers I have already had to defend in front of executives, not concepts I would be meeting for the first time.

The ambiguity side of the role is familiar too. At Simon Vision Consulting I led a 5-consultant team that turned 170 facilities into a market-entry recommendation for Safran with no existing data set to start from, and at Applied Materials I turn scattered input from Sales, Engineering and Accounts into one market-sizing view every quarter, automating the repetitive synthesis with AI agents built on Claude. Translating priorities into execution and getting rapidly up to speed on an unfamiliar topic are instincts I use every week, at PriceKeel and at Applied Materials both.

I would like to talk about where Aidentifi's operating system breaks down today and what I would fix first. Proof trail at adhithyabhaskar.vercel.app/ref/aidentifi.
