PITCH DECK | LOGITECH GLOBAL EB2B CHANNEL MARKETING MANAGER

Amazon for Business and your top eB2B resellers do not need another brand story. They need someone who has already run the retail-media playbook and can show you the RoAS.

Channel strategy, creative and A/B-tested performance work, proven on both the brand side and the retail-media side of the same marketplace.

- **3x ROAS in one month** on Amazon Ads and Criteo retail media (Pixis)
- **40% ROAS lift** across 30+ campaigns via Amplitude and Tableau
- **15+ A/B tests, -25% CPA** across Google, Microsoft, Meta and LinkedIn (Plug Power)
- **53% to 61% channel margin** on distributor/reseller repricing (Sensata)
- **AI agents built on Claude** automating my own market analysis today

WHY THIS DECK EXISTS

This req asks one person to run channel strategy, creative and performance measurement at once, across resellers that each behave differently.

What that actually requires

A single marketer who can write the channel plan for Amazon for Business and the CDW/Insight/Staples-style resellers, brief the creative team on EPC/A+ content, and then read the CTR and RoAS data well enough to know if it worked.

Comfort with the fact that a US/EU buyer and an APAC buyer do not shop the same eB2B platform the same way, so one global plan still needs regional judgment under it.

A cross-functional operator who can sit between Channel, BG Product Marketing and Regional L4B Marketing without any one of them owning the whole GTM story alone.

What I have already run

At **Pixis**, I ran Amazon Ads and Criteo retail-media campaigns on Amazon's marketplace for an 8-client D2C portfolio, including PPC across international, non-English markets.

At **Sensata**, I owned channel GTM for new sensing products through a network of OEM and distributor partners across North America and Europe, then moved into pricing and raised distributor margins from 53% to 61%.

At **Applied Materials** today, I run AI agents built on Claude against my own recurring market and competitive analysis.

The through-line: every channel number I have owned, retail media or distributor, had to survive the same question this role will get asked, which creative and which channel plan actually moved RoAS, not just reach.

THE MANDATE, MAPPED

What the posting asks for, and where the proof already sits.

What the role covers

> *"Lead creation of high-converting ads, campaign assets, and enhanced product content (EPC/A+ pages), collaborating with designers and copywriters."*

> *"Drive A/B testing and experimentation to maximize Return on Ad Spend (RoAS) and pipeline outcomes across L4B channels."*

> *"Define and report on core KPIs: ad click-through rate (CTR), conversion rates, pipeline contribution, and sales velocity."*

> *drawing on established research on Western (US/EU) vs. Eastern (APAC) buying behaviors and procurement cycles.*

My proof

Pixis, creative and performance in one loop: rebuilt the shopping feed, bid strategy and creative for a fashion brand's Amazon Ads campaign, landing 3x ROAS in one month.

Pixis, the A/B and analytics layer: read Amplitude and Tableau across 30+ live campaigns to find what to scale, lifting ROAS 40%.

Plug Power, the testing discipline: 15+ A/B tests across Google, Microsoft, Meta and LinkedIn, cutting CPA 25% while lifting conversion 20%.

Sensata, the regional and channel-partner read: 30+ interviews with OEM and distributor stakeholders across global accounts, plus competitive analysis across EMEA and the US.

THE PROOF, IN DEPTH

The same RoAS-and-creative loop this role runs, already proven on a live retail-media account.

Same pattern across three companies: set the channel plan, brief or build the creative, then let the CTR and RoAS data decide what runs again next cycle.

3x ROAS

One Month, Amazon Ads + Criteo

Shopping-feed cleanup, smart bidding and a creative refresh on Amazon's marketplace for a leading fashion brand (Pixis).

-25% CPA

15+ A/B Tests, Paid Search & Social

Google Ads, Microsoft Ads, Meta and LinkedIn, with bid optimization lifting conversion 20% at the same time (Plug Power).

53% to 61%

Channel/Distributor Margin

Repricing negotiated directly with the partners who resell the product, the same relationship an eB2B reseller is to Logitech (Sensata).

None of this was a positioning memo that sat in a folder. Each number closed a loop a channel partner, a sales team or a performance dashboard was accountable for, the same accountability this role answers to on Amazon for Business and its peer resellers.

FIRST 30 DAYS

What the first month owning eB2B channel GTM at Logitech for Business looks like.

WEEK 1

Map the reseller-by-reseller baseline

Pull current CTR, conversion and RoAS by platform across Amazon for Business and the top eB2B resellers, and flag where creative or content (EPC/A+) is the likely bottleneck versus where the channel plan itself needs work.

Why first: the same feed-and-creative diagnosis that found the fastest lever on the Pixis Amazon Ads account before touching spend.

WEEK 2-3

Ship one A/B test per priority reseller

Run a creative or bid-strategy test on the one or two resellers carrying the most pipeline, in partnership with BG Product Marketing and Regional L4B Marketing so the positioning stays consistent across platforms.

Why now: the same test-fast, read-the-data cadence that cut CPA 25% at Plug Power and lifted ROAS 40% at Pixis.

WEEK 4

Set the regional investment recommendation

Turn Week 1-3 results into a regional investment case, flagging where US/EU versus APAC buying behavior changes the channel plan, and hand sales enablement the version each regional team can act on.

Why this fast: the same regional-nuance discipline behind the EMEA-versus-US competitive reads at Sensata.

CLOSE

Logitech for Business needs one person to own channel strategy, creative and the RoAS number behind it. I already run that exact loop.

The retail-media half: at **Pixis** I ran Amazon Ads and Criteo campaigns on Amazon's marketplace for an 8-client D2C portfolio, landing **3x ROAS in one month** and a **40% ROAS lift** across 30+ campaigns through Amplitude and Tableau analysis.

The channel-and-testing half: **15+ A/B tests** cut CPA **25%** at Plug Power, and distributor-margin negotiations at Sensata raised channel margins **53% to 61%**, the same reseller relationship this role manages with Amazon for Business and its peers. At Applied Materials I run AI agents built on Claude against my own recurring analysis today.
