Hiring Team, Dealpath

Your posting says PMs on the Strategic Accounts pod build their own prototypes and drive solution design directly with AI, rather than waiting on a dedicated designer for every artifact. I already run that workflow: at Applied Materials I automate repetitive analysis with AI agents built on Claude, and before that I wrote the PRD and built the working prototype for SwipeHire, an AI job-matching platform, directly with AI tools (Python, OpenAI API, React), zero-to-one, with no existing playbook to lean on.

I have also owned a roadmap for the accounts that matter most to the business, not the product in the abstract. At Sensata I owned the roadmap and a 100+ feature backlog for sensor solutions sold to OEM and distributor accounts, running 30+ structured discovery interviews directly with those accounts instead of handing discovery to a dedicated research team, the same setup a Strategic Accounts pod runs on. That discovery work lifted CSAT 22% once the fixes landed, and the same KPI framework I built in SQL and GA4 across 50K+ connected devices turned usage signal into backlog priority and lifted feature adoption 18%.

Account signal is something I have turned into roadmap and retention decisions before, not just reported on. At Pixis I managed an eight-account portfolio and cut client churn 50% by reading account health signal early and acting on it, the same gross-retention-to-roadmap translation this role asks for on Dealpath's largest customers. Sales enablement work I built off that same discovery loop improved win rates 30% for 50+ reps at Sensata, so the roadmap work did not stop at shipping, it carried through to the account team closing on it.

I would welcome 15 minutes to talk through how I would read the retention and expansion signal on one of your largest accounts and turn it into the next roadmap item. Proof trail at adhi-product-ai.vercel.app/ref/dealpath.
