

PITCH DECK | ASSURANT SR PRICING ANALYST

A Senior Pricing Analyst turns price, channel and customer-behavior data into a recommendation Finance, Product and Actuarial can act on, across device and product protection programs. I have already run that loop end to end, just on a different protection surface.

Segmented pricing analysis, statistical modeling and traceable documentation from someone who has built the guardrail engine, not just filled out the model template.

\$700K+ margin recovered in 2 quarters via segmented pricing analysis at Sensata

\$627M target, 1,200 opportunities segmented by region, product family and product line

53% to 61% distributor margin lift from repriced, documented discount logic

R-based regression modeling demand elasticity and profit-maximizing price points

Claude AI agents automating recurring pricing analysis at Applied Materials

A Senior Pricing Analyst sits between the data and the decision, across price bands, plan types and channels **all at once.**

What losing that discipline runs into

A pricing program without segmented performance tracking does not fail loudly. It fails as a price change nobody can trace back to a hypothesis, a dashboard that cannot say why a channel's performance slipped, and a test result nobody can tell apart from seasonality.

Product, Finance, Actuarial and Data Science all touch the same pricing decision, so a gap in segmentation or documentation becomes everyone's guessing game at the next review, not just one team's problem.

The fix is not another spreadsheet. It is someone who treats segmentation, modeling and documentation as one connected discipline instead of three separate jobs.

What I have already run

At **Sensata**, I segmented 1,200 pricing opportunities by region, product family and product line against a \$627M target, the same price-band and program-level analysis this role runs across device and protection plans.

At **PriceKeel**, I built the audit trail and the comparison-group guardrail logic a pricing decision gets checked against before it goes live, the traceable documentation this role keeps for test designs and approvals.

Both mean I have sat on the segmentation side and the documentation side of the same pricing decision, not just one or the other.

A Senior Pricing Analyst who builds statistical models, designs structured pricing tests and documents every assumption is describing this exact loop: segment the data, model the opportunity, keep the decision traceable.

What the Senior Pricing Analyst opening asks for, and where the proof already sits.

What the role covers

- Analyze performance across products, price bands, plan types, clients, markets, channels, and customer groups, including relationships among price, sales volume, attachment or conversion, revenue, margin, and loss costs.*
- Build, validate, document, and maintain statistical models using methods such as regression, forecasting, segmentation, time-series analysis, and other appropriate quantitative techniques.*
- Design and evaluate structured pricing tests with defined hypotheses, comparison groups, success measures, sample requirements, decision criteria, and business guardrails.*
- Maintain traceable documentation for data sources, model versions, analytical assumptions, test designs, approvals, pricing changes, and outcomes.*

My Proof

- Price-band and segment analysis:** segmented 1,200 pricing opportunities by region, product family and product line against a \$627M target at Sensata, recovering \$700K+ in margin in 2 quarters.
- Statistical modeling:** built R-based regression models to forecast demand elasticity and profit-maximizing price points, and build inflection-point forecasting models at Applied Materials.
- Guardrails and comparison logic:** built the guardrail engine at PriceKeel that recommends a discount boundary learned from a company's own closed-won and closed-lost deal comparison groups.
- Traceable documentation:** built the audit trail that gives Finance an explainable record behind every pricing decision at PriceKeel, and documented the repriced discount logic behind Sensata's distributor-margin lift for governance review.

Bleeders and Leakers: segment every pricing opportunity before it reaches a leadership review.

Built as a BU-wide Power BI system covering 1,200 pricing opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines, with pipeline funnel, regional scorecards, win rate, avg \$/win and stage distribution checked before leadership set the next quarter's targets.

At PriceKeel that same instinct became the operating model: I built the guardrail engine and the audit trail myself, so the pricing model and the governance record are never two different stories.

What the first month owning pricing analytics at Assurant looks like.

WEEK 1 Learn the program data and the current guardrails Sit with Pricing, Actuarial and Data Science to walk the current segmentation (price band, plan type, channel), the model documentation standard, and shadow one structured pricing test end to end. ----- Why first: the same instinct that had me learn PriceKeel's own CPQ and discount logic before building a guardrail on top of it.	WEEK 2-3 Own a segmentation and forecasting cycle Take ownership of one program's performance analysis end to end: segment by price band and channel, build the forecast, and present the financial scenario at the next review. ----- Why now: the same segment-by-segment discipline that made the Bleeders and Leakers dashboard usable in a leadership review.	WEEK 4 Tighten model documentation and test design Document one model's assumptions and version history, and draft a structured pricing test (hypothesis, comparison group, decision criteria) for the next pricing change. ----- Why this fast: a governance trail only earns its keep if it gets re-checked every cycle instead of trusting last quarter's setup.
---	--	---

CLOSE

You are hiring someone to turn price, channel and customer-behavior data into a recommendation Finance and Product can act on, and keep it traceable. I have already built that discipline, from both sides of the decision.

The core proof is Sensata: a Power BI system segmenting **1,200 pricing opportunities against a \$627M target**, distributor margins lifted **from 53% to 61%**, and \$700K+ in margin recovered in 2 quarters.

What is harder to find is someone who has also built the guardrail engine and audit trail behind a pricing decision from the ground up. **I built that at PriceKeel**, so the modeling and documentation discipline this role runs is not something I would need to learn on the job.
