Hiring Team, MaintainX

Your posting says the work shows up in the physical world: when a launch lands right, a technician goes home on time. I spent two years inside that same kind of work at Sensata, taking sensing-product launches from early customer interviews through general availability, and the $2M+ first-year revenue and 30% rep win-rate lift only happened because the positioning read the same way to the buyer signing the PO and the technician who had to make the part work on a line.

Naming and positioning is the part of this req I would want first. At Sensata I wrote the messaging framework that turned a sensing capability from an engineering spec into one story a procurement buyer and a field technician both understood, then built the collateral, case studies and launch decks that gave 50+ reps something to use on day one, lifting win rates 30% in contested deals. That is the same translation work this role asks for between your product counterparts and sales, just running on manufacturing floors and fleets instead of automotive sensing lines.

The adoption-goal half of the role maps to tools I already run. I used Amplitude and Tableau against 30+ campaigns at Pixis to find adoption signal inside user behavior, and built SQL and GA4 KPI frameworks at Sensata to tell which cohorts were adopting a new sensing feature versus just trialing it. At Applied Materials I now turn multi-product-group market sizing into one view for Sales, Engineering and Accounts, and clear the repetitive analysis work with AI agents built on Claude so more time goes into the story itself.

Operations is new ground inside Autodesk, and from the outside MaintainX still looks like the team setting how a launch gets run there, which is exactly the part of this req I would want to shape. I would welcome 15 minutes to talk through how the Sensata launch motion maps onto a P1 or P2 launch on your roster. Proof trail at adhi-product.vercel.app/ref/maintainx.
