

PITCH DECK | HARVEY SENIOR PERFORMANCE MARKETING MANAGER, PAID SOCIAL

Enterprise legal buyers close in months, not days. Most paid social programs still optimize for last click. I already built the pipeline-stage closed loop this role needs, at \$100K/month scale.

Account-based targeting built from firmographic and behavioral signal, an audience-to-CRM discipline, and a testing roadmap built to hit pipeline targets, not funnel vanity metrics.

\$100K/month - LinkedIn, Meta, Google and Microsoft Ads budgets owned end to end at Plug Power

CPA -25% / CPL -50% - from a Salesforce-to-ad-platform closed loop, not manual reporting

8 enterprise accounts, \$15K-\$90K/month each - account-level segmentation and churn -50% at Pixis

SQL + GA4 - KPI frameworks across 50K+ devices to find and target high-intent accounts

AI agents on Claude - in production use today, Applied Materials

Scaling LinkedIn and Meta spend against a 6-12 month legal enterprise sales cycle is not a creative problem. It is **an audience-and-attribution problem wearing a media-buying costume.**

What that actually requires

Building account-based audience frameworks from first-party and CRM signal, not just platform lookalikes, so spend reaches the law firms and corporate legal departments that actually move through a long cycle.

Keeping Marketing Ops and Analytics in the loop on every campaign, so a click becomes a lead, an opportunity and eventually a pipeline dollar the CRM can trace back to the ad.

Running pacing, bid strategy and budget allocation against pipeline targets, with a testing roadmap across creative, messaging, audience and landing pages that keeps improving the numbers instead of guessing.

What I have already built at that layer

Automated the **Salesforce, Adobe Analytics, GA and Google Tag Manager** stack at Plug Power for closed-loop attribution, tying LinkedIn and Meta spend to MQL quality and stage 1 pipeline instead of clicks.

Built **KPI frameworks in SQL and GA4** across 50K+ connected devices at Sensata to segment high-intent accounts before a dollar of spend went against them, the same account-based instinct this role calls audience strategy.

Ran a **structured testing roadmap** across bidding, creative and audience at Plug Power (15+ A/B tests, 50+ campaigns) and at Pixis (full-funnel restructuring for 3x ROAS in one month).

The through-line: I do not just run LinkedIn and Meta campaigns. I have already built the CRM-to-ad-platform loop that makes enterprise spend accountable to pipeline over a long sales cycle, which is the actual hard problem inside "paid social manager."

What the posting is asking for, and where the proof already sits.

What the role covers

- "Own end-to-end strategy, execution, and optimization of paid social campaigns across LinkedIn, Meta, and emerging social platforms, managing a significant budget to hit aggressive pipeline targets."*
- "Develop audience strategies leveraging first-party data, account-based targeting, lookalike modeling, and platform-native targeting capabilities."*
- "Design and run experiments across creative, messaging, audiences, landing pages to identify scalable growth opportunities."*
- "Work closely with Marketing Operations and Analytics teams to ensure accurate attribution, measurement, and reporting."*

My proof

- Plug Power, \$100K/month:** owned LinkedIn, Meta, Google Ads and Microsoft Ads budgets end to end, building the pacing and forecast plans presented to leadership for approval.
- Sensata + Pixis:** built KPI frameworks in SQL/GA4 across 50K+ devices and used Amplitude/Tableau to build the account segments behind a 40% ROAS lift, the same signal-based work this posting calls audience strategy.
- Plug Power, testing roadmap:** 15+ A/B tests across 50+ inbound campaigns closed creative and audience gaps, and a full-funnel rebuild at Pixis (feed, bidding, creative, lookalikes) delivered 3x ROAS in a month.
- Plug Power, CRM loop:** automated Salesforce, Adobe Analytics, GA and Google Tag Manager for closed-loop reporting, the attribution and measurement discipline this role asks Marketing Ops and Analytics to partner on.

Plug Power: pacing, bid discipline and a CRM tie-back, not three separate jobs.

Built as the pacing, bid and CRM-attribution system behind paid social and paid search across multiple business units, not run as one flat budget line.

\$100K/mo

Paid Social & Search Budget Owned

LinkedIn, Meta, Google Ads and Microsoft Ads, planned and paced against leadership-approved forecasts.

25% / 50%

CPA Cut / Cost Per Lead Cut

From bid optimization plus an automated Salesforce-to-ad-platform closed loop, not manual reporting.

15+ / 50+

A/B Tests / Inbound Campaigns

A testing roadmap across creative, bidding and audience that also lifted organic visibility 35%.

The same account-aware instinct shows up at Pixis: I built the segments behind a 40% ROAS lift for 8 enterprise accounts running \$15K-\$90K/month each, and cut churn 50% by watching account-level behavior instead of channel-level metrics alone, the discipline a long legal sales cycle rewards.

What the first month owning Harvey's paid social program would look like.

WEEK 1 Sit with the CRM before the ad accounts Pull pipeline-stage data first to see which law firm and corporate legal segments already convert, the same audience-first move that shaped the KPI frameworks at Sensata. ----- Why first: an audience framework built on platform data alone misses the accounts the CRM already knows convert.	WEEK 2-3 Wire the closed loop, then test against it Stand up the same UTM, pixel and offline-conversion tracking that closed the loop at Plug Power, then run the first creative, messaging, audience and landing-page tests against real MQL-to-SQL data. ----- Why now: testing without a CRM tie-back optimizes for the wrong number over a 6-12 month cycle.	WEEK 4 Turn the first pipeline read into the roadmap Use what the first closed-loop numbers say about pipeline contribution to set next quarter's testing roadmap across creative, audience and landing pages, the same handoff that took Plug Power's early reads to a -25% CPA program. ----- Why this fast: a paid social program earns its next budget by showing the pipeline math, not the CTR.
--	--	---

CLOSE

Harvey needs paid social run as a CRM and account-targeting problem first, media buying second. I have already built that closed loop at \$100K/month scale.

The core proof is Plug Power together with the account-segmentation work at Sensata and Pixis: a [Salesforce-to-ad-platform closed loop](#) that cut CPA 25% and cost per lead 50%, and the [SQL, GA4 and Amplitude discipline](#) that builds an audience from CRM and behavioral signal instead of a platform's default lookalike.

What's harder to find is someone who has run that loop at scale and can also read a market and forecast where it moves next, the market-sizing and forecasting work carried today at Applied Materials, so pacing decisions hold up past the current quarter and across a legal buyer's long sales cycle.
