Hiring Team, Vercel

At Applied Materials I automated the repetitive parts of my own forecasting and market-sizing work with AI agents built on Claude, not because a manager asked for it but because rebuilding the same pivot table every cycle was a waste of a decision-maker's time. Your posting calls that out directly: if I have automated part of my own job, that is a strong signal. It is not a slide I built for this application. It is how I already work.

The paid-media side of the fit is just as direct. At Plug Power I owned \$100K/month in marketing budgets across multiple business units, running Paid Search and Paid Social across Google Ads, Microsoft Ads, Meta and LinkedIn, and cut CPA 25% through bid optimization and testing while a rebuilt WordPress-to-Pardot lead flow cut cost per lead 50%. At Pixis I carried P&L and revenue targets for an 8-client, \$15K-\$90K-per-client-per-month portfolio, delivered 3x ROAS in a month for a fashion brand through full-funnel restructuring, and used Amplitude and Tableau to lift blended campaign ROAS 40%. Google, Meta, LinkedIn, creative and audience testing, event-based reporting: that is the same channel mix and the same operating rhythm this role runs on, just at an earlier point in the budget curve than the \$1M-\$5M range you are hiring against.

What I read in "agentic infrastructure" is a company betting that the next layer of leverage is not more headcount, it is software and agents doing what used to take a team. That is exactly the operating model I have been building toward on the marketing side: fewer manual reporting cycles, more time on the creative and audience calls that actually move ROAS and CAC. Scaling paid acquisition for both a self-serve developer motion and an enterprise buyer motion at once is a harder measurement problem than either one alone, and it is the kind of problem I want to be working on next.

I would like to bring the paid-acquisition ownership from Plug Power and Pixis together with the AI-native reporting habit from Applied Materials to Vercel's acquisition engine. Proof trail at adhi-growth-ai.vercel.app/ref/vercel.
