Hiring Team, Upstart

Your posting calls out a specific problem: campaign execution that depends on manual handoffs to technical teams. I have closed that exact gap before. At Plug Power, I automated the WordPress-to-Pardot lead flow so marketing stopped waiting on an engineer to move a lead from one system to the next, cutting cost per lead 50%. I built the same kind of self-service by automating the Mar-Tech stack across Salesforce, Adobe Analytics and Google Tag Manager for closed-loop reporting, connecting vendors and data sources that were already paid for but not talking to each other.

The roadmap half of the role is just as familiar. At Sensata I owned the product roadmap for a connected sensor line, translating stakeholder needs into a 100+ feature backlog delivered with Engineering in Agile across 3 regions, which accelerated releases 25% and cut time-to-market 20%. I ran 30+ interviews with OEMs and distributors to surface the workflow bottlenecks behind that backlog, the same discovery work your posting describes as understanding how marketers work before building for them. I also built the instrumentation layer underneath it: KPI frameworks in SQL and GA4 across 50K+ connected devices that flagged high-intent cohorts and adoption signals, the kind of attribution and measurement work your team is trying to strengthen across channels.

The predictive piece is where I would lean on recent habit as much as past scope. At Applied Materials I build forecasting models across product groups and automate repetitive analysis with Claude AI agents, always with a human checking the output, which is the posture I would bring to helping your team predict customer response and recommend audiences rather than build a black box no one trusts. At Pixis, an AI marketing platform, I carried P&L for an 8-client, $15K-$90K/month portfolio across Google, Meta, retail media and iOS UA, using Amplitude and Tableau to decide where to move spend and lifting ROAS 40% in the process.

Upstart is trying to grow originations while keeping acquisition costs low in a regulated industry, which is a harder version of a problem I have already shipped against. The fuller build trail, including the Sensata roadmap work and the Mar-Tech automation, is at adhi-product-ai.vercel.app/ref/upstart.
