Hiring Team, Y/n

At Plug Power I owned a $100K/month paid budget across Google, Meta, Microsoft and LinkedIn, and the job was the one your posting describes: test channels, read the numbers, scale what works and cut what doesn't. Structured A/B tests on audiences, keywords and creative took CPA down 25%. Closing the loop from ad spend to stage-1 opportunities in Salesforce meant every budget move was argued from data, not from a platform dashboard.

The consumer side is where I learned the craft. At Pixis I hired and ran an 8-person team across 8 client accounts spending $15K-$90K a month each, including iOS app UA attributed through Appsflyer and Adjust. For a fashion brand we restructured the full funnel (feed cleanup, smart bidding, a creative refresh, lookalike expansion) and hit 3x ROAS inside a month. At GenY Medium I rebuilt Meta catalog and Google Merchant Center feeds for D2C brands and got them to 16x ROAS. Creative is the lever I trust most on paid social, because it's the one you can test fastest.

"Figure out the good marketing channels" is the kind of brief I like. On SwipeHire, an AI job-matching app I built from zero, I scoped the MVP, ran 8+ A/B tests and 12+ user interviews on onboarding, and lifted activation 25% across 50+ early users. Small team, no playbook, a chart to read every morning.

Y/n has something most consumer apps would pay for: over a billion messages sent and 10M+ community stories, which is a library of ad creative waiting to be cut. My first move would be to treat the most-played stories as the creative brief, test their hooks as short-form video, and let spend follow retention rather than installs. I measure in SQL, GA4 and Amplitude, and at Applied Materials I automate the reporting with Claude AI agents, so reading the charts happens daily without eating the week.
