PITCH DECK | HANDSHAKE REVENUE OPERATIONS MANAGER

Handshake's new business reps need one operator who turns a bookings goal into a pipeline, coverage and productivity number the whole team trusts. I have already built that system, with the dashboard and the audit trail attached.

A $627M-target pipeline dashboard built from zero, and the CRM, CPQ and deal-approval stack I run today as a founder.

- **$433M surfaced** from a pipeline dashboard built from scratch
- **+30% win rate** from sales enablement built for 50+ reps
- **CRM, CPQ, forecast cadence** run today as a founder
- **Claude AI agents** automating my own reporting and deal inspection
- **53% to 61%** channel margin recovered in under 2 quarters

WHY THIS DECK EXISTS

The job is not "run the reports." It is being the trusted operating partner who turns an ambiguous bookings number into a target the team acts on.

What that actually requires

One definition for every metric, pipeline health, stage conversion, coverage, attainment and rep productivity, so three dashboards never disagree.

Clean Salesforce data and sales-process hygiene: stage definitions, routing rules and lead and account handoff, because a forecast is only as good as the data behind it.

AI and automation that gives reps and managers time back, built with GTM Engineering, not bolted on after the fact.

What I have already run

At **Sensata**, I built the FY2026 Bleeders and Leakers dashboard from scratch, one metric set across 3 regions, 4 product families and 20 product lines.

As founder of **PriceKeel**, I run the CRM, CPQ, forecast and pipeline review cadence and deal approvals myself, with an audit trail Finance can check.

At **Applied Materials**, I automate my own repetitive reporting and deal inspection with AI agents built on Claude.

> **The through-line: every pipeline system I have built started from a bookings number with no agreed metric behind it, not a dashboard someone else had already designed.**

THE MANDATE, MAPPED

What the posting asks for, and where the proof already sits.

What the role covers

> *"Own new business reporting on pipeline health, stage conversion, sales cycle, coverage, attainment and rep productivity, with one clear definition for every metric."*

> *"Keep the sales process clean: stage definitions, rules of engagement, lead and account routing, and Salesforce data quality."*

> *"Build AI and automation programs: partner with GTM Engineering... automate the manual work."*

My proof

Sensata, built from scratch: designed the FY2026 pricing and pipeline dashboard end to end, surfacing $433M in margin gaps for leadership to prioritize by rep and product line.

PriceKeel, run today: own the CRM, CPQ, forecast cadence and deal approvals, with the audit trail that keeps the data trustworthy.

Applied Materials, hands on with AI: automate repetitive reporting and deal inspection with Claude agents, the same mandate this role runs with GTM Engineering.

Sensata enablement: built sales enablement for 50+ reps, lifting win rates 30%, the funnel-friction fix a new business team needs.

THE PROOF, IN DEPTH

Find the friction, fix the data, then put a number on the fix.

The same three-step pattern, run at Sensata, Plug Power and PriceKeel: find where the metric breaks down, fix the process or model behind it, then put a number on what changed.

$433M Surfaced

Dashboard Built From Scratch

1,200 pipeline opportunities ranked against a $627M target across 3 regions and 20 product lines, no existing tool to build from.

+30% Win Rate

Sales Enablement, 50+ Reps

Built decks and case studies that fixed a funnel-friction point for the whole rep team at Sensata.

-50% Cost Per Lead

Lead-Flow Automation, Plug Power

Automated the WordPress and Pardot handoff, tying SEM performance to MQL quality and stage 1 pipeline.

None of these were a dashboard that sat in a folder. Each one closed the loop from an ambiguous number to a fix the team ran on.

FIRST 30 DAYS

What the first month on Handshake's new business Revenue Operations team looks like.

WEEK 1

Map the new business metric set

Pull pipeline, coverage and productivity data across Mid-Market, Strategic Corporate and Public Sector, and find where the three segments already disagree on a definition.

Why first: the same first move behind the Sensata dashboard, size what is known before building what is missing.

WEEK 2-3

Fix one funnel-friction point

Pick the stage where deals stall most, and partner with Sales, Marketing and Enablement on the process or routing fix, the same cross-functional build behind the Plug Power lead-flow result.

Why now: not a report, a fix, the same instinct behind the -50% cost-per-lead result.

WEEK 4

Stand up the AI automation backlog

Scope the first reporting or deal-inspection task to hand to GTM Engineering, the same hands-on Claude-agent habit I run today at Applied Materials and PriceKeel.

Why this fast: automation that ships in week 4, not a roadmap slide.

CLOSE

You are hiring an operating partner who turns a bookings number into a pipeline system the team trusts. I have already built that system, twice, with a number on each one.

The reporting half: a **$627M-target dashboard built from scratch**, surfacing $433M in margin gaps, and sales enablement that lifted win rates 30% for 50+ reps at Sensata.

The automation half: running CRM, CPQ, forecast cadence and deal approvals myself at PriceKeel, and automating my own reporting and deal inspection with Claude agents at Applied Materials today.
