

PITCH DECK | BEATO CHIEF OF STAFF

Extending a founder's bandwidth across strategy, fundraising and operations is a systems problem, not a scheduling one. I already run that system today.

A record of turning ambiguous, cross-functional priorities into owners, decisions and a measured outcome, built running a company of my own and inside a multi-\$100M business.

\$700K+ / 2 quarters margin recovery, from a vague mandate to a negotiated outcome

1,200 / \$433M pricing opportunities synthesized into one leadership shortlist

PriceKeel founder and CEO, running pilots and raising the first round myself

AI agents on Claude in daily production use today at Applied Materials

5-consultant team led end to end, presented to Safran leadership

A founder's extension does not get handed a clean mandate. The job is **structuring the mandate first, then executing it.**

What that actually requires

Taking a loosely defined priority, with limited context and incomplete information, and turning it into owners, a decision and a measurable outcome, without waiting for someone else to define the problem first.

Running the operating rhythm underneath a founder's agenda: the board decks, investor updates and leadership reviews that consolidate scattered data into one business narrative.

Translating data from growth, clinical and finance functions into decision-ready recommendations, then coordinating across teams to remove the blocker that was stalling execution.

What I have already run, at that exact layer

Took the **Bleeders and Leakers program** at Sensata from a vague "margin is leaking somewhere" mandate to a \$433M shortlist and \$700K+ recovered, negotiated directly with senior executives in 2 quarters.

Founded **PriceKeel** to build this exact decision layer myself: the guardrail engine and audit trail that lets Finance check a call without calling the founder first, run while raising the company's own first round.

Run the **OKR cadence and leadership decks** that keep three different businesses aligned, automating the repetitive synthesis with AI agents built on Claude.

The through-line: I have already built the operating rhythm and the decision layer this seat asks for, at a founder-adjacent scope, before anyone called it a Chief of Staff job.

What the BeatO Chief of Staff opening asks for, and where the proof already sits.

What the role covers

- "Own the follow-through by driving founders' top priorities to completion, coordinating with stakeholders, removing blockers, and ensuring execution."*
- "Run the operating rhythm by preparing board decks, investor updates, and leadership reviews while consolidating data and business narratives."*
- "Build decision-ready insights by translating data from growth, clinical, and finance teams into meaningful recommendations."*
- "Lead special projects involving cross-functional business problems, new initiatives, market opportunities, and operational improvements."*

My proof

- Follow-through to completion:** took the Bleeders and Leakers program from a vague mandate to a negotiated \$700K+ recovery in 2 quarters, removing blockers across Sales, Finance and distribution.
- Operating rhythm, board-ready:** run the OKR cadence and leadership decks behind weekly and quarterly business reviews at Applied Materials, consolidating cross-functional data into one narrative.
- Decision-ready insights from data:** built the FY26 Power BI model that turned 1,200 scattered pricing opportunities into a \$433M shortlist leadership could prioritize by salesperson and product line.
- Cross-functional special projects:** designed PriceKeel's guardrail engine and audit trail myself, then set up its CRM, CPQ and deal-approval process from zero.

Bleeders and Leakers: a vague margin mandate to a negotiated number, with the mechanism that kept producing it.

Built as the owner of a program with no existing dashboard, no existing owner list and no existing cadence, the same starting point a founder's "figure this out" priority usually looks like.

The same instinct runs through PriceKeel and Applied Materials: build the decision mechanism and the operating cadence first, so the business keeps producing the number without someone re-doing the analysis every quarter.

What the first month extending the founders' bandwidth at BeatO would look like.

WEEK 1 Sit inside the real signal Talk to growth, clinical and finance leads to find where the founders' top priorities are stalling today, the same audit that grounded the Bleeders and Leakers program before a dashboard existed. ----- Why first: a follow-through system built on assumptions instead of real blockers is the fastest way to miss the mark.	WEEK 2-3 Ship the first decision-ready brief Take one cross-functional problem, consolidate the growth, clinical and finance data behind it, and deliver a board-ready recommendation, the same move that turned 1,200 opportunities into one shortlist at Sensata. ----- Why now: one measured recommendation that moves a real decision beats a week-one list of ideas.	WEEK 4 Turn the first win into the cadence Use what the first brief proved to set the operating rhythm, the leadership review and reporting cadence, that keeps producing decision-ready insight without rebuilding it from scratch every cycle. ----- Why this fast: a cadence only earns trust once it has already moved one real decision.

CLOSE

BeatO needs someone who treats this seat as a systems problem, not a scheduling one. I have already built that system, twice.

The core proof is Sensata and PriceKeel together: a **\$700K+ margin program** that started as a vague mandate and ended as a repeatable, owned mechanism, and a company of my own where I run the CRM, CPQ and deal-approval process while raising its first round.

What is harder to find is someone who has done that inside a large, multi-region business **and** founded their own company around the same discipline of turning ambiguity into a decision, with the OKR cadence and leadership decks to make it stick. That combination is what a founders' extension needs most.
