Hiring Team, BeatO

The Bleeders and Leakers program I ran at Sensata started the way your posting describes this seat: a priority with no existing owner, "margin is leaking somewhere" across a \$627M business. I built the dashboard that turned 1,200 scattered pricing opportunities into a \$433M shortlist by salesperson and product line, then negotiated \$700K plus of it back into margin in two quarters, working directly with senior executives on the AP26 models and site-transition calls that decision depended on. That is the same move your Chief of Staff needs across growth, clinical and finance data: translate what is scattered across teams into one recommendation a founder can act on.

I am also the person who builds the operating rhythm underneath that number, not just the number itself. At PriceKeel, the company I founded, I designed the guardrail engine and audit trail that lets Finance check a pricing decision without calling me first, and I run pilots with early customers while raising the company's first round myself. At Applied Materials today I run the OKR cadence and leadership decks behind weekly and quarterly business reviews, consolidating data from Sales, Engineering and Accounts into one narrative, the same discipline a board deck or investor update needs.

Every job I have had has required the same range your posting is asking for: structure an ambiguous, cross-functional problem with limited context, then go sit with the team actually doing the work when the plan stops matching reality. I did that with distributor partners at Sensata, with an 8-person team running client accounts at Pixis, and now with a founding team raising its first round. A newest business line growing fast enough to need its own operating rhythm, on top of a core business already serving millions, is exactly the kind of special project I would want to own.

What I would bring on day one is a habit of turning ambiguity into a number and the cadence that keeps producing it, plus the comfort working with incomplete information that comes from building a company of my own. Proof trail at adhithyabhaskar.vercel.app/ref/beato.
