Hiring Team, UBC

Your posting asks for someone to own the sales and marketing technology stack, not just administer it. I set up and run that stack myself as founder of PriceKeel: our CRM, CPQ, forecast and pipeline reviews, and deal approvals, built from nothing rather than inherited, with a compliance-ready audit trail Finance can check without asking me first.

The predictive-analytics half of your req is also work I have shipped, not studied. At Sensata I built a BU-wide Power BI model that flags line items where a price change could lift profitability over 50%, and a separate FY2026 dashboard tracking 1,200 pipeline opportunities against a $627M target, which surfaced $433M in margin gaps for leadership to prioritize. Both tools are still in use, which matters more to me than whether a dashboard looked good the day it shipped.

On evaluating AI tools: I treat that as a standing part of the job, not a side project. At Applied Materials I run Claude-based agents on repetitive GTM analysis and personally review every output before it reaches a forecast, the same check-before-trust discipline I would bring to recommending any new tool for your stack.

Ramping inside a technical, regulated-adjacent B2B domain is familiar territory, both the semiconductor market at Applied Materials and the industrial sensing business at Sensata asked for exactly that. More at adhithyabhaskar.vercel.app/ref/ubc.
