Hiring Team, ProjectStudio.ai

I set up PriceKeel's CRM, CPQ and deal-approval process myself, tested the core pricing hypothesis against real closed-won and closed-lost deal data before it touched a single investor conversation, and I am running pilots on it right now while raising the company's first round. That is the loop your EIR mandate is asking for: find the opportunity, build the smallest version that can prove or kill it, then carry it to a business case leadership can act on. I have run that loop as a founder, not just supported someone else running it.

Value leakage from rework, idle time and fragmented coordination is the same shape of problem I have chased inside large, operations-heavy businesses. At Sensata I took a vague margin-leakage mandate and turned it into a $433M shortlist of pricing opportunities, then recovered $700K+ in two quarters by negotiating the fix directly with the sales and finance teams who owned the relationships. At Applied Materials today I turn scattered input from Sales, Engineering and Accounts into one market-sizing view for a fast-growing semiconductor segment, because that cross-functional gap has no owner until someone decides to be one.

Before PriceKeel I built SwipeHire from a blank page: wrote the PRD, scoped the MVP, ran the user interviews and A/B tests myself, and got it to 50+ early users before deciding which parts of the idea were worth scaling further. That is the part of this role I would enjoy most: forming the hypothesis, running the smallest test that can kill it, and only then writing the business case that goes to leadership.

I would like to talk about which initiative you would want an EIR to pick up first. Proof trail at adhithyabhaskar.vercel.app/ref/projectstudio-ai.
