Hiring Team, Gusto

At Sensata, I built the go-to-market for a new line of sensing products that had no settled audience and no playbook to inherit: I set the positioning myself, tested it against 30+ interviews with OEMs and distributors, and only handed the motion to the standing product marketing team once it was proven, at \$2M+ in first-year revenue. That is the exact shape of work your Experimentation team is standing up, proving a motion before it has an owner, and it is the part of product marketing I have consistently been asked to do first.

I read this role as asking for someone who treats "no settled audience yet" as the job description rather than a blocker. The test-and-learn instinct is not new to me. At Plug Power I ran 15+ A/B tests across paid channels to find what actually moved CPA before scaling a budget behind it. As a founder, I built pricing tiers for my own product (SwipeHire) from competitor teardowns and willingness-to-pay research, then ran 8+ A/B tests and 12+ interviews before locking the model in. Across both, the pattern is the same: cheap tests first, conviction second, scale third, which is how I would approach a new Gusto motion before it has a system built around it.

The cross-functional tissue this role asks for, orchestrating across Product, Sales, Marketing and Customer Experience without an existing process to lean on, is also familiar. At Sensata I partnered directly with Engineering and Sales to size a market and set pricing from scratch, then built the KPI framework in SQL and GA4 that told us which cohorts and signals actually mattered, work that turned into feature adoption up 18% and conversion up 15% on priority launches. At Pixis I ran the same build-the-system-from-nothing exercise for an 8-client, multi-industry portfolio, writing vertical playbooks that cut churn 50% because no single generic playbook fit every account, a dynamic I expect scales up, not down, across the small businesses Gusto serves.

I am also comfortable being the one who builds the AI-native way of working rather than just adopting one. At Applied Materials today I run my own research and competitive analysis through AI agents built on Claude instead of rebuilding the same report every cycle, which is the kind of system-building habit a team with "no clear owner yet" needs more of, not less. Proof trail at adhi-product.vercel.app/ref/gusto.
