PITCH DECK | GAP INC. MANAGER, PRICING STRATEGY & ANALYTICS

# This brand is refreshing its pricing architecture and needs one person to own the discount budget, reconcile it in season, and keep the pricing agents honest, all at once. I have already run each piece separately, now built to run as one.

*Discount-budget ownership, in-season financial modeling and pricing-agent validation from someone who has built the audit trail behind an AI pricing guardrail, not just read its output.*

- **$700K+** margin recovered in 2 quarters owning the Bleeders and Leakers discount-budget program at Sensata
- **53% to 61%** distributor margin lift from repriced discount logic
- **$627M target** Power BI dashboard reconciling 1,200 pricing opportunities across 3 regions, 20 product lines
- **$433M** in margin gaps surfaced for leadership to prioritize
- **Claude AI agents** automating and validating recurring pricing analysis at Applied Materials

WHY THIS DECK EXISTS

# A pricing-architecture refresh is really three jobs held by one person: discount-budget owner, in-season analyst and pricing-agent validator, across one brand at once.

### What losing that discipline runs into

A discount budget without in-season reconciliation does not fail loudly. It fails as a markdown that looked fine in the plan and a margin number that surprises Finance a quarter later.

Merchandising, Planning, Company Planning and Commerce and Experience all touch the same price, so a gap between the guardrail and what actually shipped becomes everyone's guessing game at the next business review.

The fix is not another report. It is someone who treats pricing principles, the discount budget and in-season reconciliation as one connected discipline, the same way this brand is asking its pricing-agent outputs to be checked before they inform a decision.

### What I have already run

At **Sensata**, I owned the strategic discount budget inside the Bleeders and Leakers program and reconciled it in season, recovering $700K+ in margin in 2 quarters and lifting distributor margins from 53% to 61%.

At **PriceKeel**, I designed the guardrail engine and the audit trail that back every discount exception with evidence Finance can act on, the exact discipline this role measures for adoption and effectiveness.

Both mean I have sat on the discount-decision side and the governance-and-reporting side of the same gate, not just one or the other.

**A Manager, Pricing Analytics who owns pricing principles, the discount budget, in-season analytics and pricing-agent validation, while reviewing an analyst's work, is describing this exact loop: set the guardrail, reconcile against it, keep the evidence honest.**

THE REQ, MAPPED

# What the Manager, Pricing Analytics opening asks for, and where the proof already sits.

## What the role covers

> *Develop and own the pricing guardrails adopted by the cross-functional team, including measuring their effectiveness and driving adoption.*

> *Reconcile in-season pricing execution with forecasted performance and actuals, and build "what if" scenarios and financial models for Merchandise Planning and Company Planning.*

> *Analyze internal and external data to set and maintain competitive price positioning, building the models and benchmarks the team relies on.*

> *Apply and validate outputs from pricing agents, confirming data integrity and business logic before recommendations are finalized.*

## My Proof

**Pricing guardrails, measured and adopted:** designed PriceKeel's guardrail engine, an explainable discount guardrail learned from each company's own closed-won and closed-lost deals, backed by an audit trail for adoption.

**In-season reconciliation and financial modeling:** built the FY2026 Bleeders and Leakers Power BI dashboard reconciling 1,200 opportunities against a $627M target, and modeled AP26 revenue scenarios and customer quotes with senior executives.

**Competitive price positioning:** drove +12% YoY revenue and +8% market share through price realignment built on competitive benchmarking across 10+ key players.

**Pricing-agent validation:** automates and validates repetitive pricing analysis with Claude AI agents at Applied Materials before outputs feed a recommendation.

THE PROOF, IN DEPTH

# Bleeders and Leakers: reconcile the discount budget before it reaches a leadership review.

Built as a Power BI system covering 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, with win rate, stage distribution and profitability by segment checked before leadership set the next quarter's targets.

## $700K+

**Margin Recovered, 2 Quarters**

Deal-by-deal discount decisions checked against competitive gaps and customer willingness to pay, the same in-season reconciliation this role owns for the brand's discount budget.

## 53% to 61%

**Distributor Margin Lift**

Repriced the channel discount logic and documented it for governance review, so the new guardrail held past the first quarter.

## $433M

**Margin Gaps Surfaced**

Every gap traced to a specific salesperson and product line, the same segment-level detail a brand-wide pricing scorecard needs.

At PriceKeel that same instinct became the product itself: a guardrail engine and audit trail that keep the discount decision and the governance record as one story, not two.

FIRST 30 DAYS

# What the first month owning pricing analytics for this brand looks like.

WEEK 1

### Learn the brand's pricing architecture and discount guardrails

Sit with the Brand Pricing Performance Lead to walk the current pricing principles, discount-budget mechanics and pricing-agent workflow, and shadow one in-season reconciliation cycle end to end.

**Why first:** the same instinct that had me learn PriceKeel's own guardrail logic before building the audit trail on top of it.

WEEK 2-3

### Own one in-season reconciliation and scenario cycle

Take ownership of one "what if" scenario and financial model for Merchandise Planning and Company Planning, confirm the forecast assumptions, and present the reconciliation at the next business review.

**Why now:** the same segment-by-segment discipline that made the Bleeders and Leakers dashboard usable in a leadership review.

WEEK 4

### Validate a pricing-agent output and review the analyst's work

Validate one pricing-agent recommendation end to end, document where its logic needs a correction, and give feedback on an in-flight analysis from the analyst on the team.

**Why this fast:** a pricing guardrail only earns trust if someone checks it every cycle instead of assuming last quarter's logic still holds.

CLOSE

# You are hiring someone to own the discount budget, reconcile it in season, and keep the pricing agents honest, for one brand at a time. I have already built that discipline, from the discount decision to the governance record.

The core proof is Sensata: a Power BI system reconciling **1,200 pricing opportunities against a $627M target**, distributor margins lifted **from 53% to 61%**, and $700K+ in margin recovered in 2 quarters through in-season discount-budget management.

What is harder to find is someone who has also built the guardrail engine and audit trail behind an AI pricing recommendation, not just consumed its output. **I built that at PriceKeel**, and I validate pricing-agent outputs daily at Applied Materials, so the AI-partnership half of this role is not something I would need to learn on the job.
