Hiring Team, DoorDash

At Sensata I raised distributor and channel-partner margins from 53% to 61% in under two quarters, recovering $700K+ in margin along the way, by repricing how a multi-$100M Industrial BU charged for parts moving through distribution. That is the same work this role does for Retail: structure merchant economics, decide where to price to win and where to protect margin, and make sure the deals in place are actually performing.

The planning and operating-cadence half of the role is just as familiar. I built the FY2026 Bleeders and Leakers program from a blank page: 1,200 pricing opportunities modeled against a $627M target across 3 regions, with a Power BI dashboard that gave leadership $433M in margin gaps to prioritize and a weekly cadence to act on them. Turning a target into an operating plan, and a plan into a number leadership can review every week, is the discipline this role is asking for, not a new one to learn.

I move comfortably between cents and millions because I have had to: the same week I was shaping multimillion-dollar customer quotes with Sensata's executives, I was also flagging line items where a half-point price change moved profitability. I run PriceKeel's CRM, CPQ, forecasting and deal approvals myself end to end, and at Applied Materials I carry P&L and revenue targets while automating the repetitive parts of that analysis with Claude AI agents, so the time goes into the tradeoffs, not the data pull.
