SUMMARY

Product manager who turns complex business problems into a crisp PRD, designing the technical plan engineering needs to ship it quickly. Thrives in ambiguity: wrote the PRD and took SwipeHire, an early-stage AI job-matching platform, zero-to-one to 50+ users in a fast-moving, low-structure environment. Owns the sensor product development roadmap and a 100+ feature backlog at Sensata, collaborates with engineering daily across 3 regions, and cut time-to-market 20% without slowing production releases. Automates repetitive analysis with Claude AI agents at Applied Materials, the same instinct for lightweight process at scale instead of manual review. Measures impact and iterates off SQL/GA4 cohort data and structured customer interviews before calling anything shipped.
