Hiring Team, Brain Co.

Your posting asks for someone to own a product area end to end: a scoped problem, a crisp PRD, a build with engineering and design, and a measurable result. That is the exact shape of what I am doing right now at PriceKeel, a decision-integrity layer I founded for B2B SaaS deal pricing. I wrote the spec, designed the guardrail engine, and I am running live pilots with early customers while raising the company's first round. I did not pick up PRD-to-launch ownership from a title. I picked it up by being the only person who could write the PRD.

Before PriceKeel, I ran the same discipline inside a larger organization, which is probably closer to what a growing Product team at Brain Co. needs day to day. At Sensata I owned the product roadmap and a 100+ feature backlog for sensor solutions, prioritizing with engineering in Agile across 3 regions and cutting time-to-market 20% without slowing the releases customers depend on. That backlog came from 30+ structured interviews with OEMs and distributors, not assumptions, and the iteration lifted CSAT 22%. I also wrote the PRD and scoped the MVP for SwipeHire, an AI job-matching platform I built zero-to-one on Python, OpenAI's API and React, shipping it to 50+ early users and iterating off GA4 funnel data and 8+ A/B tests.

Your posting reads like a team still deciding how it wants product to run, not one handing a new hire a finished playbook, and that is the part I like most. At Applied Materials I already build the habit your team is scaling into: automating repetitive market-sizing and forecasting analysis with AI agents built on Claude, so the hours a model can do stop eating the time a person needs for judgment calls. I would bring that same instinct to help shape how Brain Co.'s product team builds process as it grows, lightly, not bureaucratically.

I would welcome a conversation about the specific product area you have in mind for this seat. Proof trail at adhi-product-ai.vercel.app/ref/brain-co.
