Hiring Team, Applied Materials

I am currently Strategic Marketing III at Applied Materials, and this req caught my eye for the overlap it has with work I already do here: value-based pricing and forecasting models across multiple product groups, now pointed at the ALD market's two Key Product Units instead of the semiconductor equipment line I size today.

Deal analysis partnering with Business Management on profitability and commercial deal structures is close to the center of what I did at Sensata before joining Applied Materials. I led the Bleeders and Leakers program there, recovering $700K+ in margin in 2 quarters through exactly this kind of deal-level analysis, then raised distributor and channel-partner margins from 53% to 61% through the same ASP-increase discipline this role asks for.

The bookings, billing and backlog analysis this role runs sits close to the FY2026 Power BI dashboard I built at Sensata, tracking 1,200 pricing opportunities and bookings against a $627M target across 3 regions, with a BU-wide price-increase model flagging where a change could lift profitability more than 50%. Being inside Applied Materials already, I can bring that forecasting and deal-analysis discipline into the ALD business from week one.

Advanced Excel modeling and the R-based pricing models I built for elasticity forecasting are the analytical backbone behind all of it. Proof trail at adhi-pricing-ai.vercel.app/ref/applied-materials.
