PITCH DECK | STORM FINANCE STRATEGY MANAGER, FOUNDER'S OFFICE

A Founder's Office turns ambiguous questions into decisions only when the mechanism underneath, the dashboard, the review cadence, the escalation path, already works. I have built that mechanism before, at $627M scale.

An operating-cadence framework for a growing AI-powered personal finance platform, plus the track record of running every layer of it myself.

- **$700K+ margin** recovered in 2 quarters at Sensata via the Bleeders and Leakers program
- **$433M in margin gaps** surfaced for leadership through a dashboard tracking 1,200 opportunities
- **PriceKeel** founder, owning an undefined pricing-decision problem end to end
- **Cross-functional sizing** at Applied Materials spanning Sales, Engineering and Accounts
- **8-person team** hired and managed at Pixis, OKRs and leadership decks every quarter

WHY THIS DECK EXISTS

Storm Finance is converting strategic intent into execution across product, growth, operations, finance and technology. That conversion only holds if the operating mechanism underneath it works.

What converting intent into results actually requires

Turning an ambiguous market, customer or financial question into a decision-ready recommendation before it stalls the team.

An operating mechanism, a review cadence, a dashboard, an issue log and an escalation path, that keeps cross-functional initiatives aligned and exposes risk early.

Leadership materials and investment cases that connect evidence, trade-offs and action so the Founder can decide fast.

What I have already run, at that exact layer

Built the **FY2026 Bleeders & Leakers Power BI dashboard** tracking 1,200 pricing opportunities against a $627M target, surfacing $433M in margin gaps for leadership to prioritize.

Founded **PriceKeel**, where the guardrail engine and audit trail turn an undefined pricing-approval problem into a decision Finance can trust.

Ran **OKRs with weekly and quarterly business reviews** and built the leadership decks behind them at every stop, from Applied Materials to Sensata to Pixis.

The through-line: every role I have held is some version of turning a cross-functional question into a tracked, accountable decision. That is the job description underneath this one.

THE REQ, MAPPED

What the Strategy Manager opening asks for, and where the proof already sits.

What the role covers

Own strategic initiatives sponsored by the Founder, defining objectives, milestones, decision rights, and success metrics.

Build operating mechanisms for priority initiatives, including review cadences, dashboards, issue logs, and escalation paths.

Prepare leadership materials, investment cases, and performance updates that connect evidence, trade-offs, and actions.

Track initiative performance against agreed outcomes, diagnose variance, and recommend course corrections.

My proof

Objectives and decision rights: founded PriceKeel and carry P&L and revenue targets at Applied Materials, both built on defined milestones and decision rights from day one.

Operating mechanisms: the Bleeders & Leakers Power BI dashboard (pipeline funnel, regional scorecards, stage distribution) is a review cadence and escalation path running at $627M scale.

Leadership materials: built the leadership decks and AP26 revenue models presented directly to Sensata's senior executives.

Diagnosing variance: that same dashboard surfaced $433M in margin gaps by salesperson and product line so leadership could prioritize the fix.

THE PROOF, IN DEPTH

A 3-layer operating-cadence framework for a growing Founder's Office, built from what already works.

A starting framework for institutionalizing execution discipline, not a biography: three layers that keep a strategic initiative from stalling between the decision and the dashboard.

LAYER 1

Decision log

Every strategic initiative gets one page before work starts: the question, the decision rights, the milestone and the metric that proves it worked.

Built before: defined objectives and decision rights for PriceKeel's own build-versus-pilot calls every month.

LAYER 2

Review dashboard

A living scorecard, by initiative and owner, that turns weekly updates into a single view of where the plan and the number have diverged.

Built before: the Sensata dashboard did this at $627M scale: 1,200 opportunities, regional scorecards and stage distribution in one view.

LAYER 3

Escalation path

A standing rule for when a variance gets flagged to the Founder versus resolved inside the team, so risk surfaces early instead of at the quarterly review.

Built before: the same dashboard surfaced $433M in margin gaps by salesperson and product line, routed to leadership to prioritize.

Same instinct as PriceKeel: build the decision trail first, so execution does not stall waiting on the next review.

FIRST 30 DAYS

What the first month inside Storm Finance's Founder's Office would look like.

WEEK 1

Map the current decision trail

Sit with the Founder and functional leads to find where today's strategic initiatives actually lose time: an undefined decision right, a missing metric, or a review that happens too late, the same audit that grounded the Bleeders and Leakers program before a dashboard existed.

Why first: a mechanism built on the wrong bottleneck just adds more reporting.

WEEK 2-3

Ship one operating mechanism

Turn one live initiative into the first review cadence, dashboard or issue log the team actually uses, modeled on the Bleeders and Leakers build at Sensata.

Why now: one mechanism that moves one real decision beats a week-one framework deck.

WEEK 4

Turn it into a cadence

Set the recurring rhythm, a scorecard update, a cross-functional review, or an escalation checkpoint, that keeps surfacing risk without being rebuilt from scratch each cycle.

Why this fast: a cadence only earns the Founder's trust once it has already moved one real decision.

CLOSE

Storm Finance is building the operating discipline behind an AI-powered personal finance platform. I have spent five years building exactly that discipline, one dashboard and one decision at a time.

The core proof is the Sensata Bleeders and Leakers program: a Power BI dashboard tracking **1,200 opportunities against a $627M target** that surfaced **$433M in margin gaps** for leadership, and **$700K+ in margin recovered in 2 quarters**.

What is harder to find is someone who has also founded a company whose entire pitch is a decision that an undefined problem has been structured into, the same operating gap a Founder's Office exists to close.
