Hiring Team, Mecka

Your posting asks for someone to build the deal desk that every commercial team runs its deals through, not inherit one that already exists. I have done that twice: as founder of PriceKeel I built the guardrail engine and audit trail that gives Finance and Sales one final-approval record instead of a policy memo, and before that as Pricing Lead at Sensata I ran the Bleeders and Leakers program, a deal-by-deal review against a $627M target that recovered $700K+ in margin in 2 quarters. Building the standard intake and approval threshold for a brand-new program, which is what this role is, is work I have already done from nothing.

The cost-model and deal-structuring side maps the same way. I raised distributor and channel-partner margins from 53% to 61% by repricing account by account, not by blanket policy, and I shaped multimillion-dollar customer quotes and AP26 revenue models directly with senior executives at Sensata, the same business-case and capital-allocation conversation this role brings to leadership. PriceKeel runs on exactly the cost-per-deliverable logic your deal desk would need: every discount exception gets modeled against what the deal actually costs before it closes.

I use AI tools in this work daily, not as a novelty. I automate pricing and forecasting analysis with AI agents built on Claude at Applied Materials, the same practical AI fluency your posting asks for in building models and automating routine pricing work so the desk spends its time on the complex deals.
