PITCH DECK | AWS PRODUCT MARKETING MANAGER, TECHNICAL, AMAZON WORKSPACES

WorkSpaces is selling five products (Personal, Pools, Applications, Secure Browsers, VDI Partners) against three incumbents, while opening an entirely new story about agentic AI desktops. That is a positioning problem I have already solved, just with sensors instead of servers.

A technical PMM who turns multi-product infrastructure into one buyer story CIOs, CISOs and IT Ops actually trust.

- **$2M+ first-year revenue** from an end-to-end GTM launch on a new technical product line at Sensata
- **+15% conversion** turning raw technical specs into buyer-ready positioning for OEM and distributor engineers
- **+30% win rate** from sales enablement built for 50+ reps against entrenched incumbents
- **AI agents built on Claude** automating my own technical market analysis at Applied Materials today

THE PROBLEM, AS I READ IT

Five WorkSpaces products, three well-funded incumbents, and one new category story to tell at the same time. That is a fragmentation risk, not just a content backlog.

What makes this hard right now

Persistent desktops, pooled desktops, application streaming and secure browsing each have their own buyer moment, but Citrix, Omnissa and Microsoft AVD all sell a simpler, single-product story against you.

"Agentic AI desktops" is a new category claim. Said the wrong way to a CISO, it reads as a buzzword before it reads as infrastructure.

IT decision-makers, security leaders and desktop admins each need a different proof point from the same underlying product.

Why I have already run this exact problem

At **Sensata**, I owned positioning for a new sensing-product line sold into OEM and distributor engineers who had entrenched incumbent suppliers, turning technical specs into one buyer-ready story across regions.

At **Applied Materials** today, I build the value-based pricing and market-sizing models that sit directly with Engineering, the same technical-depth work a CIO conversation demands.

I am also building **PriceKeel**, my own B2B SaaS product, which keeps me on the buyer side of exactly this kind of infrastructure purchase decision.

The through-line: translating fragmented technical capability into one story a skeptical technical buyer will defend to their own VP, the same work, different hardware.

THE MANDATE, MAPPED

What the posting asks for, and where the proof already sits.

What the role covers

> *"Translate product capabilities into positioning and messaging that resonates with IT decision-makers, security leaders, and end-user computing teams."*

> *"Create compelling content that earns trust with executive and technical buyers... TCO analyses."*

> *"Serve as the domain authority... against Citrix, Omnissa (VMware), Microsoft Azure Virtual Desktop."*

My proof

Sensata, technical-to-buyer translation: built the KPI frameworks myself in SQL and GA4 across 50,000+ connected devices, then turned those specs into positioning that lifted conversion 15% on priority launches.

Sensata, sales enablement vs. incumbents: built decks, case studies and battlecards for 50+ reps, lifting win rates 30% against entrenched suppliers, the Citrix/Omnissa/AVD fight on different hardware.

Sensata, executive trust: briefed senior executives directly on multimillion-dollar customer quotes and competitive positioning calls.

Applied Materials, agentic framing: live market-sizing and pricing work with Engineering, automated with Claude AI agents, the direct analog to WorkSpaces' own agentic-AI expansion.

THE PROOF, IN DEPTH

Three numbers behind the same muscle: turn technical depth into a story the skeptical buyer signs off on.

The pattern that matters for WorkSpaces: own the positioning, arm the sellers against entrenched incumbents, then prove the story held with executives who had final sign-off.

$2M+

First-Year Revenue, End-to-End GTM

Positioning, messaging, channel and launch built and shipped in one motion for a new technical product line across North America and Europe.

+30% Win Rate

Sales Enablement vs. Incumbents

Decks, case studies and competitive battlecards built for 50+ reps, used to win share back from entrenched suppliers.

+12% YoY / +8% Share

Price and Positioning Calls Briefed to Execs

Competitive benchmarking across 10+ players, briefed directly to senior leadership on multimillion-dollar accounts.

None of these were a positioning deck that sat in a folder. Each one closed the loop from message to a number Sales or Engineering was accountable for.

FIRST 30 DAYS

What the first month owning GTM for a WorkSpaces product slice looks like.

WEEK 1

Map the buyer-by-buyer gap

Sit with Product, Solutions Architecture and Sales to pull apart what a CISO, an IT Ops lead and a desktop admin each need to hear differently about persistent vs. pooled desktops and secure browsing, then find where today's content blurs the three.

Why first: the same first move behind the Sensata KPI work, find where the signal breaks before rebuilding the story.

WEEK 2-3

Build the competitive battlecard, live

Stand up the Citrix, Omnissa and Microsoft AVD battlecard and first-call deck with Sales and Field Enablement, grounded in a TCO analysis that survives the skeptical IT-director follow-up, not just the headline comparison.

Why now: the same cross-functional build that moved Sensata's win rate 30% instead of shipping a deck no one used.

WEEK 4

Name the agentic-desktop story without the buzzword

Co-author the first agentic-workspaces positioning piece with Product, anchored in a concrete workload and TCO outcome a CIO can defend internally, then use an AI agent to keep the competitive-landscape tracker current every cycle.

Why this fast: the same habit that keeps my own market-sizing reporting moving at Applied Materials today, not a plan for someday.

CLOSE

You are hiring someone to make five products sound like one story to a buyer who has been burned by a desktop migration before. I have already run that exact translation, just on a different product line.

The positioning half: **$2M+ first-year revenue** and **+15% conversion** from turning raw technical specs into buyer-ready messaging for OEM and distributor engineers at Sensata, the same skeptical-buyer translation WorkSpaces needs for CIOs and CISOs.

The competitive and enablement half: **+30% win rate** from battlecards and first-call decks built for 50+ reps against entrenched incumbents, plus the live, Claude-agent-automated market work I run today at Applied Materials, the direct analog to WorkSpaces' own agentic-AI expansion.
