Hiring Team, Amazon Web Services (AWS)

At Sensata, I built the KPI frameworks myself, in SQL and GA4, across 50,000-plus connected industrial devices, then wrote the positioning that turned those specs into a case an OEM engineer could defend to his own VP, the same skeptical read a CIO or CISO gives a desktop migration before signing off. This WorkSpaces seat asks for exactly that translation, across five product lines and against Citrix, Omnissa and Microsoft AVD, which is a tougher, more interesting version of a problem I already know how to solve.

Direct evidence of fit:

- Owned end-to-end GTM for a new Sensata product line across North America and Europe, positioning, pricing, channel and launch together, driving $2M+ first-year revenue and +35% qualified leads.
- Built content and positioning that earned trust with OEM and distributor engineering buyers, lifting conversion 15% on priority launches.
- Built the sales enablement library, first-call decks, case studies and competitive battlecards, used by 50+ reps, lifting win rates 30% against entrenched incumbents.
- Drove +12% YoY revenue and +8% market share through competitive benchmarking and pricing calls briefed directly to senior executives.

The agentic-AI chapter you describe for WorkSpaces is the part I find genuinely interesting, not just because it is new, but because I run a version of it already. As Strategic Marketing III at Applied Materials, I build value-based pricing for a fast-moving semiconductor market and automate the repetitive side of that analysis with Claude AI agents, so the strategic work gets more of my time, not less. I am also building PriceKeel, a decision-integrity layer for B2B SaaS deal pricing, on the side, which keeps me close to how a technical buyer actually signs off on a purchase.

I would like to bring that technical-buyer track record to Amazon WorkSpaces. Proof trail at adhi-product-ai.vercel.app/ref/aws if you want to see the launch and enablement work firsthand.
