Hiring Team, Airwallex

Your posting asks for someone who can take a technical product and turn it into content that converts, not just traffic. That is the work I did at Sensata: turning sensing-product APIs and features into customer-facing positioning and case studies for an engineering-heavy buyer, which lifted conversion 15% on priority launches and win rates 30% across a 50-rep sales team. I ran 30+ customer interviews with OEMs and distributors first, so the messaging was built on what those buyers actually asked, not a guess at it.

The SEO half of the role is close to how I spent time at Plug Power and GenY Medium. At Plug Power I closed keyword-strategy gaps and built SEO partnerships that lifted organic search visibility 35%, then automated the WordPress and Pardot content-to-lead flow so a gated asset had a clear line to pipeline instead of just a download count. At GenY Medium I ran the SEO site audits themselves: keyword clustering, internal linking and backlink review across a portfolio of e-commerce clients.

Measurement is where I actually spend most of my week. I built KPI frameworks in SQL and GA4 on 50K+ connected devices at Sensata to find which cohorts were worth targeting, and at Applied Materials I build the forecasting models that multiple product groups plan against. I would bring the same habit to a content engine: treat traffic as a leading indicator, not the scoreboard, and keep asking what a page did to pipeline before deciding to scale it or retire it.

I also use AI agents built on Claude to automate the repetitive parts of my own analysis, with a human check before anything goes to leadership, which should help with the volume a global content calendar demands. Proof trail at adhi-growth-ai.vercel.app/ref/airwallex.
