Hiring Team, PGAGI

At Sensata I built a Power BI model of 1,200 pricing opportunities against a \$627M target across 3 regions and 20 product lines, then used it to recover \$700K plus in margin in two quarters by taking the Bleeders and Leakers program from a data problem to a negotiated outcome with senior executives. That is the same job I read into this Founder's Office seat: PGAGI is moving from mid-market clients into enterprise and public-sector accounts, and someone has to turn that expansion from an ambition into a sequenced plan the founder can actually execute against.

I am also running that exact seat myself right now. I am building PriceKeel, a decision-integrity layer for B2B SaaS deal pricing, as the sole operator handling fundraising conversations, the CRM and pipeline reviews, and deal approvals end to end. That is on top of carrying P&L and revenue targets as Strategic Marketing III at Applied Materials, where I turn scattered input from Sales, Engineering and Accounts into one market-sizing view and automate the repetitive research behind it with AI agents built on Claude. PGAGI is building an AI-native communication business; I already treat an AI agent as a teammate on my own work, not a slide in a deck.

At Pixis I hired and managed an 8-person team running 8 client accounts, each with its own P&L target, and cut churn 50% by swapping a generic report for playbooks built off what each account's own data was actually saying. Scaling a founder's agenda across fundraising, GTM and product strategy takes the same instinct: find the number that is actually true underneath the noise, then build the structure that makes the next person's execution easier, not the report that looks the busiest.
