PITCH DECK | IMPIRICUS SENIOR PRICING ANALYST

A pricing analyst seat that owns deal support, DealHub and cross-product KPI dashboards needs someone who already runs all three in one build.

Deal-by-deal quotation review, dynamic inventory-based pricing instincts, and the CPQ/CRM system ownership that keeps pricing governance and cross-product dashboards clean.

- **$700K+** in margin recovered in 2 quarters at Sensata
- **53% to 61%** distributor margin lift through repricing
- **$627M** pipeline, 1,200 opportunities, $433M in margin gaps surfaced
- **Builds and runs** its own CRM/CPQ configuration as a founder
- **Claude AI agents** automating recurring pricing analysis

WHY THIS DECK EXISTS

A pricing analyst role at a multi-product platform does not lack candidates who know pricing theory. It lacks someone who has already owned quote review, CPQ system administration and cross-product dashboards as one job, not three.

What this seat runs into

A quote only protects margin if it is checked against the prior deal's terms first, not approved in isolation under deadline pressure.

A CPQ platform like DealHub only stays useful if someone owns the setup, trains the sales team on it, and keeps the underlying data clean, not a one-time configuration.

Pricing across several product lines at once only works if the KPI dashboard rolls up consistently, or leadership cannot compare one line against another.

What I have already run, at comparable scale

At **Sensata**, I owned quotation approaches and deal-by-deal review inside the Bleeders and Leakers program, recovering $700K+ in margin in 2 quarters.

As founder of **PriceKeel**, I set up and run the company's own CRM and CPQ configuration end to end, the system-ownership work DealHub administration needs.

At **Sensata**, I built a Power BI dashboard rolling up 1,200 pricing opportunities across 4 product families and 20 product lines into one consistent view.

This req asks for deal support and quotation strategy, inventory-based dynamic pricing, DealHub administration, pricing KPI dashboards and cross-product analysis, and CRM data hygiene and governance. That is the loop above, already run end to end.

THE REQ, MAPPED

What the Senior Pricing Analyst opening asks for, and where the proof sits.

What the role covers

Day-to-day deal support and quotation strategy on individual transactions, including review of previous deal terms.

Inventory-based dynamic pricing models that track supply and demand across product phases.

Administration of DealHub, the company's CPQ platform, across setup, sales adoption and troubleshooting.

Pricing KPI dashboards and cross-product analysis, plus CRM data hygiene and pricing governance.

My Proof

Bleeders and Leakers at Sensata: deal-by-deal quotation review against prior terms, recovering $700K+ in margin in 2 quarters.

53% to 61% distributor margins: a repricing program run through channel partners, then documented for governance review.

PriceKeel CRM/CPQ ownership: set up and run the company's own system end to end, the DealHub-equivalent administration this role needs.

FY2026 Power BI dashboard: 1,200 opportunities rolled up across 3 regions, 4 product families and 20 product lines, surfacing $433M in margin gaps.

THE SENSATA PROOF, IN DEPTH

Bleeders and Leakers: a cross-product margin-protection program against a $627M book.

Built as a Power BI system covering 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, with pipeline funnel, win rate and stage distribution by salesperson and product line.

$433M

Margin Gaps Surfaced

Ranked every pricing risk into one cross-product view instead of chasing anecdotes line by line.

$700K+

Margin Recovered in 2 Quarters

Closed through deal-by-deal quotation review against each deal's prior terms.

53% to 61%

Distributor Margin Lift

A repricing program run through distribution, then documented for governance review.

The same seat carried AP26 revenue models and multimillion-dollar customer quotes alongside senior executives and Finance. The common thread: every case started from a deal's own history and ended in a pricing recommendation that held up under governance review.

FIRST 30 DAYS

What the first month owning Impiricus's pricing systems and DealHub instance looks like.

WEEK 1

Learn DealHub and the deal history behind it

Sit with Sales and the Pricing Lead to map how quotes move through DealHub today, and pull the prior-deal-terms data that every quotation review should check against, the same first move behind the Bleeders and Leakers program at Sensata.

Why first: a quote review is only as good as the deal history it is checked against.

WEEK 2-3

Clean the CRM data behind the first dashboard

Audit CRM data hygiene across 2 to 3 product lines, flag the first pricing-governance gaps in non-standard contract terms, and draft the inventory-based pricing logic for one product phase.

Why now: building the dashboard on clean data is what made the 53% to 61% distributor gain hold at Sensata.

WEEK 4

Ship the first cross-product KPI dashboard

Roll up price reductions, revenue realization and approval timeframes across product lines into one view, and present it to Sales, Finance and the Pricing Lead.

Why this fast: the same habit that keeps Claude agents running recurring pricing analysis at Applied Materials today.

CLOSE

You are hiring someone to own pricing systems, DealHub and cross-product dashboards together. I have already built and run that combination myself.

The core proof is Sensata: **$700K+ recovered in 2 quarters** and a **53% to 61% distributor margin lift**, both run through deal-by-deal quotation review against a $627M-opportunity Power BI pipeline.

What is harder to find is someone who also owns the system side: as founder of **PriceKeel**, I set up and run my own company's CRM and CPQ configuration end to end, and at **Applied Materials** I automate recurring pricing analysis with Claude AI agents, the same operating habit a pricing-operations seat needs for its dashboards and data hygiene.
