Hiring Team, Box

Your posting describes monitoring daily consumption and overage trends, then driving the unresolved ones to closure. That line describes the job I already had at Sensata: owning the Bleeders and Leakers program, a dashboard tracking 1,200 live pricing exceptions against a $627M target, and chasing every one of them through to closure instead of letting it sit on someone's list.

That chase recovered $700K+ in margin in two quarters and raised distributor and channel-partner margins from 53% to 61%, the kind of result that only happens when someone owns the exception queue end to end: finding the account, understanding why the number looked wrong, deciding the treatment, and following it through billing. Box's AI Units program is new usage-based math layered on an existing subscription business; the exceptions will look different, but the discipline of monitoring, triaging and closing them out is the same job.

The first-line-expert part of the role is familiar too. At Sensata, account and sales teams brought me pricing and commercial-term questions on live deals, and I turned raw usage data into Power BI dashboards that analysts and leadership could act on, the same translation your posting asks for between Business Analytics, Product and the account teams. At Applied Materials I now automate the recurring half of that reporting with AI agents built on Claude, so the forecast is a review each cycle, not a rebuild.

I would like to bring that same ownership, watch the consumption numbers, know when to escalate, build the playbook once and reuse it, to Box's Consumption Products team. Proof trail at adhithyabhaskar.vercel.app/ref/box.
