Hiring Team, KAG

Your posting wants dashboards that link marketing activity to leads, pipeline and revenue, not just activity reports. At Sensata I built that exact thing: a Power BI dashboard tracking 1,200 commercial opportunities against a $627M target across 3 regions and 20 product lines, surfacing $433M in margin gaps for leadership to prioritize by rep and product line. Turning market and competitive intelligence into a number a sales leader can act on is the job I already do.

The account-based piece is not new ground either. I built demand-generation and ABM campaigns for new industrial sensing products at Sensata, generating +35% qualified leads and $2M+ in first-year revenue, with sales enablement materials that lifted rep win rates 30%. At Plug Power I automated the Salesforce and Adobe Analytics stack so leads tracked closed-loop from channel to pipeline, cutting cost per lead 50% along the way. Managing budgets and performance against a partner is familiar too: at Pixis I ran campaign budgets of $15K to $90K a month across 8 client accounts, deciding every week in Amplitude and Tableau what to scale or cut.

Transportation, logistics and industrial markets are not a stretch from where I have spent my career. Sensata's Industrial BU is a multi-$100M business I carried P&L and revenue targets for, and Plug Power put me inside the hydrogen and industrial energy sector running a six-figure monthly paid budget. I read a funnel through to closed pipeline, not just to a lead, which is the habit new logo acquisition and whitespace expansion actually run on.

I would like 15 minutes to walk through how I would build the first 90 days of ABM campaigns for KAG's priority industries. If this req has moved to someone else's desk, point me to whoever owns it and I will follow up there.
