Hiring Team, OpenAI

The SMB Ads team's job description reads like a description of the Pixis portfolio I ran: eight advertiser accounts at \$15K to \$90K a month each, acquisition and activation on paid channels, and a retention motion I owned directly. I cut churn 50% across that book through proactive account strategy and vertical playbooks, and used Amplitude and Tableau across 30+ campaigns to lift ROAS 40%. A small-business advertiser's funnel from sign-up to first spend to repeat spend is not a new problem for me, it is the one I spent a year solving.

I also already run the AI-assisted workflow this role is built on. I automate recurring reporting and analysis with Claude agents as Strategic Marketing III at Applied Materials, and I shipped an AI job-matching platform end to end on the OpenAI API: wrote the PRD, scoped the MVP, ran 8+ A/B tests and 12+ user interviews, and lifted activation 25%. That is the same build-test-ship loop this posting asks for: turn an ambiguous growth idea into a concrete test, ship it, read the result, and move to the next one. At Plug Power I ran that loop at \$100K/month across Google Ads, Microsoft Ads, Meta and LinkedIn, cutting CPA 25% and cost per lead 50% by automating the WordPress and Pardot lead flow into one measurement pipeline.

What I would bring to this role is someone who has already run growth programs at the exact budget size and channel mix SMB advertisers operate in, not an enterprise-marketing analogy stretched to fit. I would welcome 15 minutes to talk through where that applies first. Proof trail at adhi-growth-ai.vercel.app/ref/openai.
