

PITCH DECK | OPENAI GROWTH MARKETING MANAGER, SMB ADS

SMB advertisers live and die on acquisition, activation and retention at a specific budget size. I have run exactly that funnel, at exactly that budget size, for three years.

Experiment velocity, lifecycle retention and AI-assisted workflows, proven on an 8-client SMB portfolio.

50% churn cut across an 8-client, \$15K-\$90K/month SMB portfolio at Pixis

40% campaign ROAS lift from experiment-driven optimization

\$100K/month paid budgets owned end to end at Plug Power, CPA -25%

Claude AI agents automating workflows and analysis today

Shipped a product on the **OpenAI API** myself

SMB Ads growth is not one big campaign. It is hundreds of small experiments a week, and the operator who ships the most of them, reads the results fastest, wins.

What the role actually asks for

Execute growth experiments across acquisition, activation, lifecycle and early retention: email, landing page, audience and offer tests that move advertisers from sign-up to first spend.

Use AI tools daily to prototype assets, automate workflows, analyze funnel data and generate creative variations, not as a side project but as the way the job gets done.

Translate ambiguous growth ideas into concrete tests and shipped assets while partnering across Product, Engineering, Data Science and Marketing Ops.

What I have already run

At **Pixis**, I ran acquisition and activation for an **8-client SMB portfolio at \$15K-\$90K/month each**, cutting churn **50%** and lifting ROAS **40%** through continuous testing.

At **Plug Power**, I owned **\$100K/month budgets**, ran 15+ A/B tests and automated the lead flow end to end, cutting CPA 25% and cost per lead 50%.

I automate recurring workflows with **Claude AI agents** at Applied Materials today, and I built a product end to end on the **OpenAI API** myself.

The AI-assisted execution this role asks for is not abstract for me. I build on the OpenAI API and run AI agents daily to do the exact job this posting describes.

What the Growth Marketing Manager, SMB Ads opening asks for, and where the proof sits.

What the role covers

- "Build email, in-product, landing page, audience, messaging and offer tests that help SMB advertisers reach first spend and repeat value."*
- "Use AI tools to prototype marketing assets, automate workflows, analyze funnel data, generate creative variations."*
- "Experience with SMB growth, self-serve funnels, advertiser growth... lifecycle marketing, CRM, segmentation, activation, onboarding, winback, or retention."*

My Proof

- SMB-sized portfolio, run directly:** 8 clients at \$15K-\$90K/month each at Pixis, cutting churn 50% through retention playbooks and lifting ROAS 40%.
- Paid acquisition at scale:** \$100K/month at Plug Power across Google, Microsoft, Meta and LinkedIn, CPA -25%, cost per lead -50% via lifecycle automation.
- AI-native execution:** Claude agents automate recurring analysis at Applied Materials now; shipped an AI platform on the OpenAI API end to end.
- Experiment velocity:** 15+ A/B tests at Plug Power, 30+ campaigns analyzed in Amplitude and Tableau at Pixis, 8+ A/B tests on SwipeHire.

An SMB advertiser portfolio, run end to end: **acquire, activate, retain, and prove it in the data.**

Hired and managed an 8-person team running acquisition and activation for 8 SMB-sized advertiser accounts at \$15K-\$90K/month each, carrying P&L targets and running PPC across international, non-English markets and retail media.

50%

Churn Cut
Through proactive account strategy, channel diversification and vertical playbooks, the retention motion this role is built to run.

40%

Campaign ROAS Lift
From reading Amplitude and Tableau behavior signals across 30+ campaigns and acting on them fast.

3x

ROAS in One Month
For a fashion brand via full-funnel restructuring: feed cleanup, smart bidding, creative refresh and lookalike expansion.

The same experiment discipline runs at Plug Power: 15+ A/B tests across 50+ inbound campaigns, an automated WordPress and Pardot lead flow, and a Mar-Tech stack wired for closed-loop reporting on every test.

What the first month on the SMB Ads growth team looks like.

WEEK 1 Map the current funnel Sit with Growth, Product and Data Science to read the sign-up to first-spend funnel as it exists today, and find the drop-off points a mainstream SMB advertiser hits first. Why first: the same move that grounded the Pixis portfolio: read the current numbers before changing anything.	WEEK 2-3 Ship the first experiment wave Build and launch landing-page, email and audience tests against the sharpest drop-off, using AI tools to prototype creative and copy variants fast. Why now: the experiment-velocity habit I already run: build, ship, read the result, move to the next test.	WEEK 4 Turn wins into a lifecycle program Package what worked into a repeatable activation and winback sequence, documented with QA checklists and a performance readout the team can run again. Why this fast: an experiment only counts once it survives as a program, the retention motion I ran at Pixis.
--	---	--

CLOSE

You are hiring someone to ship high-velocity growth experiments for SMB advertisers and use AI tools to do it. I have already run that exact funnel, at that exact budget size.

The core proof is Pixis: an **8-client, \$15K-\$90K/month SMB portfolio**, **50% churn cut** through retention playbooks, and **40% ROAS lift** from reading experiment data fast and acting on it.

What is harder to find is someone who has already **shipped on the OpenAI API** and is **using Claude AI agents** to automate workflows today, which means the AI-assisted execution this posting asks for is a current habit, not a claim.
