Hiring Team, Canonical

At Sensata, I built the FY2026 Bleeders and Leakers dashboard that scored 1,200 opportunities against a $627M target and raised distributor and channel-partner margins from 53% to 61% in under two quarters. That is a direct-versus-indirect channel problem, the same split your Senior Sales Operations Analyst role is being asked to run across direct, indirect and online sales. I would bring the same discipline to Canonical's territories and channel reporting.

I also run the systems side of this work daily. As founder of PriceKeel I set up and operate the CRM, CPQ, forecast and pipeline reviews, and deal approvals for a live B2B SaaS pricing product, with an audit trail Finance can check on every decision. That is the same discount-and-commission governance a global revenue operations function has to own end to end, and I have built it from zero rather than inherited it. I have also hired and managed teams as small as a handful and as large as eight, including an eight-person team at Pixis running clients across non-English markets and time zones, which is the team-leadership and remote-coordination half of this role.

Canonical runs its commercial engine on top of an open source and enterprise support business that most SaaS playbooks were not built for, and that is exactly the kind of multi-channel, global revenue structure I like untangling. I carry P&L and revenue targets today at Applied Materials and automate the repetitive parts of my own revenue analysis with Claude agents, work I would extend into the systems and reporting a team of analysts touches every week.

More of this work, including the Bleeders and Leakers build, is at adhithyabhaskar.vercel.app/ref/canonical , and I would welcome a conversation about what Canonical's Sales Operations team needs from its next hire.
