Hiring Team, Goodwin

At Sensata I built the Bleeders and Leakers benchmarking model, tracking 1,200 pricing decisions against a $627M target across three regions and surfacing $433M in margin gaps for leadership to act on. I recovered $700K+ in margin in two quarters on the back of that model, and raised distributor margins from 53% to 61%, work where the model had to be defensible enough that Finance could sign off on every exception. That is the muscle a pricing proposal for a fixed fee or value-based arrangement needs most: a benchmark you can show your work on, not just a number.

I am also founder of PriceKeel, building a pricing and benchmarking model from scratch right now, the kind of AI-enabled tool your team is looking to develop. I owned multimillion-dollar customer quotes and complex, multi-party negotiations at Sensata under tight deadlines, the same pressure an RFP or panel submission runs under. At Applied Materials I automate repetitive pricing analysis with AI agents built on Claude, and I have mentored and trained teams at every stop since Plug Power, the same instinct behind training attorneys on a new pricing approach.

What I bring is the model-building discipline that turns historical account and deal data into a benchmark someone can actually act on, the same discipline that moved Sensata from a flat price list to a defensible, exception-aware pricing system.
