Hiring Team, SolarSquare

Your posting names BITS Pilani by name as the kind of engineering background you want for this Sales Special Projects and COE seat, and that happens to be where my BE is from. But the stronger match is the work itself: right now I am running PriceKeel's governance process end to end, writing the discount-approval rules and the audit trail an operations team can actually defend to Finance, with no playbook handed to me to start from.

That is close to the "design and implement scalable SOPs and governance frameworks" line in your posting. At Sensata I did the same thing at a bigger scale. The Bleeders and Leakers program replaced a pricing review that had been running three different ways across 3 regions and 4 product families with one Power BI dashboard and tracking framework, surfaced $433M in margin gaps for leadership to prioritize, and turned into $700K+ actually recovered within two quarters.

Stakeholder management across functions is the other half of the role, and it is where I spend most of my time now. At Applied Materials I turn Sales, Engineering and Accounts input into one market-sizing view instead of three competing ones. On a Safran engagement I led a 5-consultant team and presented the market-entry recommendation directly to their leadership. Influence without authority is not a line on my resume, it is most of the job.

I would welcome fifteen minutes to talk through which process gap across your cities and verticals is costing the most right now, and how a COE function could close it in the first quarter. More detail behind these numbers is at adhithyabhaskar.vercel.app/ref/solarsquare.
