Hiring Team, Netradyne

Your posting opens with owning deal pricing, renewal pricing, deal structuring and deal analytics for a global enterprise business, and reporting into Revenue Operations. That is close to a job description of what I already run inside PriceKeel, the company I founded: I own its CRM, CPQ, price book and quote-to-approval workflow myself, including the deal-approval matrix and the Finance audit trail that backs every discount exception. I did not learn deal desk work from a manual. I built the one my own company runs on.

The deal analytics half of this role is the half I have already been graded on. At Sensata I built the FY2026 Bleeders and Leakers Power BI dashboard tracking 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, with pipeline funnel, win rate and stage distribution by product line, and used it to surface $433M in margin gaps for leadership to prioritize. $700K+ of that closed in 2 quarters through deal-by-deal negotiation, not a blanket discount change, and I raised distributor margins from 53% to 61% by repricing the renewal terms themselves so the gain held past the next cycle instead of drifting back.

Renewal uplift discipline and multi-year deal structuring are the other pieces you named, and they map to work I have actually done on hardware-adjacent businesses, not pure software. Sensata's Industrial BU sells through distribution with multi-year contracts and escalating terms, the same structure Netradyne's hardware-plus-subscription deals carry; I closed AP26 revenue models and multimillion-dollar customer quotes on exactly that kind of non-standard term with senior executives, driving +12% YoY revenue and +8% market share. I also automate the recurring parts of my own pricing and deal analysis with Claude AI agents at Applied Materials today, so the review starts from a flagged opportunity instead of a blank spreadsheet.

What I would bring to Netradyne's deal desk is someone who has already closed a quantified margin gap inside a multi-$100M hardware-and-subscription business and built the deal-approval tooling a growing deal desk needs next. Proof trail at adhi-pricing-ai.vercel.app/ref/netradyne.
