PITCH DECK | NETRADYNE MANAGER, DEAL DESK

Netradyne's deal desk needs someone who can price a multi-year, bundled hardware-and-subscription deal, govern the price book and approval matrix behind it, and turn renewal data into a business case Sales and Finance both trust. I already run that exact workflow.

Deal pricing, deal analytics and AI-built deal-approval tooling from someone who built a deal desk from zero on the side.

- **$700K+** margin recovered in 2 quarters, Sensata Bleeders and Leakers program
- **53% to 61%** distributor margin lift via renewal repricing that stuck
- **PriceKeel** - founder running my own CRM, CPQ, price book and deal-approval matrix
- **$627M** deal-pricing opportunity dashboard across 3 regions, 20 product lines
- **AI agents built on Claude** automating recurring deal and pricing analysis

WHY THIS DECK EXISTS

The hard part of this seat is not pricing one deal. It is keeping price book, approval matrix and renewal uplift policy consistent across every hardware-plus-subscription deal while Sales still closes fast.

What this seat actually requires

Modeling multi-year, bundled hardware and subscription deals, and setting the renewal uplift and escalator policy that keeps those deals healthy after year one.

Running the quote-to-approval workflow and price book governance so every exception above threshold escalates instead of sliding through unapproved.

Coaching Sales on alternatives to discounting, and building the deal and pricing dashboards that make the case before a deal needs a discount at all.

What I have already run

At **Sensata**, I built a BU-wide Power BI system tracking 1,200 pricing opportunities against a $627M target across 3 regions and 20 product lines, the same deal-desk data discipline this seat runs company-wide.

At **PriceKeel**, I built the discount guardrail and approval matrix from zero, running my own CRM, CPQ and quote-to-approval workflow end to end with a Finance audit trail on every exception.

At Sensata I raised distributor margins from 53% to 61% by repricing renewal terms, the same escalator-policy discipline this role sets for Netradyne's channel.

The through-line: every deal desk system I have touched started with "this exception needs a rule, not a one-off approval" and ended with a margin number leadership could act on.

THE MANDATE, MAPPED

What the posting asks for, and where the proof already sits.

What the role covers

> *"Modeling multi-year, bundled hardware and subscription deals... setting renewal uplift and escalator policy."*

> *"Building deal and pricing analytics and dashboards... advising on revenue recognition for non-standard terms."*

> *"Experience with multiple price books, approval matrices, and discount curves... coaching Sales on alternatives to discounting."*

My proof

Multi-year, bundled deal pricing: closed AP26 revenue models and multimillion-dollar customer quotes on non-standard terms for Sensata's multi-$100M Industrial BU, which sells hardware through distribution on multi-year contracts.

Renewal uplift that holds: raised distributor and channel-partner margins from 53% to 61% by repricing renewal terms so the gain survived past the next renewal cycle instead of drifting back.

Deal and pricing dashboards: built the FY2026 Bleeders and Leakers Power BI dashboard surfacing $433M in margin gaps across 1,200 pricing opportunities for leadership to prioritize.

Price books, approval matrices, discount curves: founded PriceKeel's guardrail engine, an explainable discount curve mapped to an approval matrix, and run its CRM, CPQ and price book myself.

THE SENSATA PROOF, IN DEPTH

Bleeders and Leakers: find the margin leak, price the fix, close it, make the renewal hold.

Built as a BU-wide Power BI system covering 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, with pipeline funnel, win rate and stage distribution by product line, so leadership could prioritize deals instead of chasing anecdotes.

$433M

Margin Shortfall Surfaced

Ranked every pricing opportunity by competitive gap and customer willingness to pay, the same deal-triage call a deal desk makes on every escalated exception.

$700K+

Margin Recovered in 2 Quarters

Closed through deal-by-deal negotiation on a documented business case, not an across-the-board discount change.

53% to 61%

Distributor Margin Lift

Repriced the renewal terms themselves, so the gain held past the first renewal cycle instead of drifting back.

The same BU also closed AP26 revenue models and multimillion-dollar customer quotes on non-standard terms, driving +12% YoY revenue and +8% market share. The common thread: every deal was priced on data, approved against a matrix, and measured after it closed.

FIRST 30 DAYS

What the first month inside Netradyne's deal desk looks like.

WEEK 1

Map today's price books, approval matrix and renewal data

Sit with Sales, Finance and Business Systems to find where today's price books, discount curves and renewal terms already live, and where exceptions are escalating informally instead of against a matrix, the same discovery step that started the Bleeders and Leakers program at Sensata.

Why first: find the leak in the workflow before naming the fix.

WEEK 2-3

Ship the first deal analytics dashboard

Build the first deal, pipeline and renewal dashboard so Sales and Finance see the same commercial risk at the same time, and start coaching Sales on alternatives to discounting using that data, the same deal-by-deal discipline that made the 53% to 61% distributor gain stick instead of drift back.

Why now: a business case closes more deals than a blanket discount ever does.

WEEK 4

Automate the recurring parts of the quote-to-approval workflow

Partner with Business Systems and IT to automate the recurring approval-matrix checks with an AI agent, so the next quote starts from a flagged exception instead of a manual review, the same AI-agent habit that keeps my own recurring pricing analysis moving at Applied Materials today.

Why this fast: the same guardrail-engine thinking that runs PriceKeel's deal approvals, not a plan for someday.

CLOSE

You are hiring someone to price multi-year hardware-and-subscription deals, govern the price book, and turn renewal data into a business case. I have already built that exact workflow, with a number on it each time.

The margin half: **$700K+ recovered in 2 quarters** and distributor margins lifted **from 53% to 61%** at Sensata, plus +12% YoY revenue and +8% market share through non-standard customer quotes closed with senior executives.

The build half: **PriceKeel's guardrail engine, price book and approval matrix**, built from zero, running my own CRM, CPQ and quote-to-approval workflow end to end. At Applied Materials I automate my own recurring pricing analysis with AI agents built on Claude instead of rebuilding the same report every cycle.
