Hiring Team, HappyRobot

Your posting asks for release notes, FAQs and enablement decks that keep the story consistent from feature launch through case study. That is the job I had at Sensata: I owned go-to-market end to end for a new line of sensing products (positioning, pricing, channel, launch) and drove $2M+ in first-year revenue, while building the sales enablement and competitive program that lifted win rates 30% for 50+ reps.

You are also asking someone to sit between product, sales and growth while reporting straight to the Head of Growth and the founders, a tighter loop than most product marketing seats run. I built that loop myself at Sensata: 30+ discovery interviews with OEMs and distributors fed directly into messaging and product fixes, and the competitive program I kept current across EMEA and the US briefed reps on 10+ key players before every launch.

The part that made me write instead of just clicking apply is who HappyRobot already sells to. DHL, Kuehne+Nagel and Uber running an AI workforce on your platform, backed by a16z and Y Combinator with over $200M raised and 5x revenue growth since your last round, sits close to the OEM and distributor accounts I have already launched into. At Applied Materials I run AI agents built on Claude to automate the market and pricing analysis that used to eat a week of every planning cycle, so the next launch brief ships faster instead of waiting on the last report.

I would like to put that launch-to-revenue track record behind HappyRobot's next feature release. Proof trail at adhi-product-ai.vercel.app/ref/happyrobot.
