Hiring Team, Notion

Your posting names Claude specifically as the AI-fluency bar, not a vague "comfort with AI tools." I already run that bar daily: at Applied Materials I automate recurring market and pricing analysis with agents built on Claude, the same hands-on habit behind four Claude certifications and the AI-reasoning guardrail engine I built for PriceKeel from an undefined decision problem.

The quantitative half matters just as much to this role, and that is where I have spent most of my last year. At Sensata I built the FY2026 Power BI dashboard tracking 1,200 pricing opportunities against a $627M target across 3 regions, surfacing $433M in margin gaps for leadership to prioritize by salesperson and product line, then partnered directly with senior executives on AP26 revenue models and site-transition strategy. That is the structure-the-ambiguous-problem-into-a-model work your posting describes, not a one-time slide deck.

I have also run the client-engagement version of this work. I led a 5-consultant team on Safran's market-entry question, narrowing 170 facilities down to a SAM of 28 and presenting the business case directly to their leadership. SQL and Power BI back every recommendation I make: at Sensata that discipline turned 50,000+ connected devices into KPI frameworks that lifted feature adoption 18% without anyone handing me the data first.

Notion's framing of Business Operations as a partner to Engineering, Product and Design, not a reporting function sitting outside the room, is exactly the seat I want. Proof trail at adhithyabhaskar.vercel.app/ref/notion.
