Hiring Team, Snowflake

At Sensata I built the Bleeders and Leakers model that surfaced $433M in margin gaps across 1,200 pricing opportunities, the kind of analysis that goes straight into a Finance leadership review, not a marketing deck. That is the audience your Department Solutions GTM role is built around: a CFO's office that actually reads the numbers instead of nodding at the slide.

I also know what it takes to get a sales team to pick up a message and run with it unchanged. Fifty-plus Sensata reps used my enablement material in the field as written, and win rates climbed 30%. Building that meant working across Account teams, Engineering and Sales the same cross-functional loop your posting describes between Account teams, Field Marketing, Technical Sales and Global PMMs, where nobody owns the whole plan and everybody has to move on the same message anyway.

At Applied Materials now, I take technical input from Sales, Engineering and Accounts and turn it into one value-based pricing view multiple product groups can act on, running AI agents built on Claude so that work moves at the pace the business needs instead of waiting on a quarterly cycle. Translating platform capability into a business-value statement a Finance leader will actually act on is the same job whether the audience sits in a semiconductor account team or Snowflake's CFO persona.

I would welcome 20 minutes to walk through how the Bleeders and Leakers work and the Sensata enablement program map onto Department Solutions. Proof trail at adhi-product-ai.vercel.app/ref/snowflake.
