

PITCH DECK | OKTA SR. ANALYST, RENEWALS STRATEGY & OPERATIONS

A 67-person Renewals org runs on four systems: a forecast that has to be accurate, capacity and book-of-business visibility, accountability reporting, and judgment on top of AI-generated analysis. I have already built all four, just not inside one renewals desk yet.

Forecast accuracy, capacity modeling and recurring accountability reporting from someone who has built the dashboard, not just filled in the number.

1,200 opportunities tracked against a \$627M target across 3 regions, 4 product families, 20 lines

\$700K+ margin recovered in 2 quarters through a recurring accountability cadence

53% to 61% channel margin lift, target set and tracked quarter over quarter

CRM + CPQ + forecast reviews owned end to end, founder of PriceKeel

AI agents built on Claude directed for analysis, judgment owned on top

A renewals org this size runs on one analytical backbone, not four separate jobs. A gap in any one of them shows up everywhere else.

What breaks without that backbone

A forecast without accuracy tracking does not fail loudly. It fails as a number that was wrong last quarter too, and nobody can say by how much or why, so the next forecast inherits the same blind spot.

Capacity and book-of-business visibility that lives in someone's head instead of a system means territory and account health get re-discovered every quarter instead of tracked continuously.

AI-generated analysis without someone directing the sources and owning the judgment on top just moves the risk from a slow spreadsheet to a fast, confidently wrong one.

What I have already run

At **Sensata**, I built the dashboard that made a \$627M target and 1,200 pricing opportunities auditable by region, product line and salesperson, the same accuracy-tracking instinct a forecast process needs.

At **PriceKeel**, I set up and run the CRM, CPQ configuration and forecast and pipeline reviews myself, so the forecasting backbone and the accountability trail are never two different stories.

At **Applied Materials**, I direct AI agents built on Claude to generate the first pass on repetitive analysis and own the judgment before it reaches a decision.

Forecasting, capacity and retention planning, accountability and measurement, and analysis and automation are describing one connected operating system, not four separate hires.

What the Sr. Analyst, Renewals Strategy & Operations role covers, and where the proof already sits.

What the role covers

- Own the weekly and quarterly forecast process end to end. Maintain accuracy tracking so we know when the forecast is wrong, why, and what to fix.
- Own target setting and capacity modeling as well as book of business management to provide renewal management with clear visibility into territory and account health.
- Own recurring reporting that holds the org accountable: product depth and adoption, true up visibility, and other measures.
- Direct AI tools to generate analysis and own the judgment on top of it to drive strategic decision making.

My Proof

- Forecast process and accuracy tracking:** built the FY2026 Bleeders and Leakers Power BI dashboard tracking 1,200 opportunities against a \$627M target, with pipeline funnel and stage distribution to trace every miss to a cause.
- Capacity and book-of-business visibility:** managed an 8-person team across 8 client accounts at Pixis on account-health visibility, and ran target setting and capacity modeling as Pricing Lead across 3 regions and 20 product lines.
- Recurring accountability reporting:** run the CRM, CPQ configuration and forecast and pipeline reviews at PriceKeel, with an audit trail Finance can check against every decision.
- Analysis and automation:** direct AI agents built on Claude to generate the first pass on repetitive analysis at Applied Materials, then own the judgment before it reaches leadership.

Bleeders and Leakers: a target gets tracked every quarter, not reset every quarter.

Built as a BU-wide Power BI system covering 1,200 pricing opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines, with win rate, avg \$/win and stage distribution checked before leadership set the next quarter's number.

At PriceKeel that same instinct became the operating model: I run the CRM, CPQ configuration and forecast and pipeline reviews myself, and I direct AI agents built on Claude to generate the first pass on repetitive analysis at Applied Materials, owning the judgment before it reaches a decision.

What the first month inside Renewals Strategy & Operations at Okta looks like.

WEEK 1 Learn the forecast and the systems behind it Sit with Renewals leadership to walk the current weekly and quarterly forecast process, the Salesforce and Tableau data model behind it, and shadow one accuracy-tracking cycle end to end. Why first: the same instinct that had me learn PriceKeel's own CRM and CPQ configuration before building anything on top of it.	WEEK 2-3 Own one capacity and book-of-business view Take ownership of one territory's capacity model and book-of-business dashboard end to end: confirm the account-health inputs, build the report, and present it at the next business review. Why now: the same segment-by-segment discipline that made the Bleeders and Leakers dashboard usable in a leadership review.	WEEK 4 Scale one recurring report for self-service Take one existing accountability report, direct an AI tool to generate the first-pass analysis against the right tables and sources, and own the judgment that turns it into a self-service view the team can run without me. Why this fast: a reporting system only scales if someone owns the judgment on top of it from week one, not after the backlog builds up.
--	---	---

CLOSE

You are hiring the analytical backbone for a 67-person Renewals org. I have already built that backbone, from the forecast to the judgment on top of it.

The core proof is Sensata: a Power BI system tracking **1,200 pricing opportunities against a \$627M target**, channel margins lifted **from 53% to 61%** and tracked quarter over quarter, and \$700K+ in margin recovered in 2 quarters through a recurring accountability cadence.

What is harder to find is someone who also runs the CRM, CPQ configuration and forecast reviews for his own company's deal flow, and directs AI agents to generate analysis while owning the judgment on top of it. **I built that at PriceKeel and Applied Materials**, so the forecasting and accountability discipline this role runs is not something I would need to learn on the job.
