Hiring Team, Veeva Systems

The Commercial Content posting asks for someone who can write a sales deck and a customer presentation that actually move a deal, not just look good in a review. I wrote the positioning and messaging that turned technical sensor specs into a customer-facing value proposition at Sensata, and once that content shipped, conversion on priority launches went up 15%.

The sales-enablement half of that work is where I spent most of my hours. I built the decks and case studies that 50-plus Sensata reps used in the field, replacing five different versions of the pitch with one, and win rates rose 30% once everyone pitched from the same story. I also owned the launch content behind a new sensing product line across North America and Europe, which taught me how one message has to hold its shape across a launch deck, a rep's pitch and a case study without drifting. That launch drove over 2 million dollars in first-year revenue. At Pixis I kept enterprise case studies and sales materials current on an ongoing basis, which is the part of commercial content that never makes the highlight reel but is the reason a sales team's story does not go stale.

Strategic planning is the other half of this role, and it is what I do now. At Applied Materials I build the market-sizing and pricing content that goes to Sales, Engineering and Accounts every week, and I use AI agents built on Claude to clear the repetitive research first so my writing time goes into the content a human actually needs to shape. I am also building PriceKeel, a decision-integrity layer for B2B SaaS deal pricing, which means I write the content that gets RevOps and Finance to trust a number, an audience that reads for evidence the same way a life sciences customer does.

What I would bring to Commercial Content is writing that holds up once it leaves the deck and gets used in the field, with the numbers to show it moved a sales team. Proof trail at adhi-product.vercel.app/ref/veeva-systems.
