Hiring Team, Freshworks

Your posting asks for someone who can explain why an architectural choice matters, not just that a feature ships. That is the job I already do at PriceKeel, the company I founded: I designed the guardrail engine that grounds every pricing recommendation in a company's own closed-won and closed-lost deals, built the audit trail that gives Finance evidence it can check, and then write the narrative that walks RevOps, Sales leadership and Finance through that logic until it holds up to their scrutiny. That is the same discipline this role asks for: ground the claim, show the evidence, make it survive a technical reader.

I am not new to AI tooling either. As Strategic Marketing III at Applied Materials I automate repetitive market and competitive analysis with AI agents built on Claude, which means I think about agent reliability and output quality as part of my own workflow, not just as a marketing topic. Before that, I shipped an AI job-matching platform (SwipeHire) zero-to-one on the OpenAI API: I wrote the PRD myself, scoped the MVP, and built the matching logic, so I have sat on the product side of an AI system, not just the messaging side of one.

The other half of your posting is translation: turning something technical into something an operator or an engineer will trust. At Sensata, I turned connected-device specs into positioning that OEM and distributor engineers acted on, backed by 30+ structured interviews that told me which claims actually mattered to a technical buyer, work that lifted conversion 15% on priority launches and raised CSAT 22%. Freshservice's AI story is being read by IT and platform teams who will test every claim against their own environment before they believe it. I have built that kind of proof before, and I want to build it for this one.

Proof trail at adhi-product-ai.vercel.app/ref/freshworks.
