Hiring Team, Hover

Your posting is clear that this seat builds the organic engine rather than inherits one. That is the exact seat I have sat in before. At Plug Power I inherited a keyword strategy with real gaps, closed them, and turned the fix into new SEO partnerships that raised organic search visibility 35%, a build, not a maintenance job. That is the same charter behind SEO, GEO and CRO you are asking one person to own here.

The CRO and technical side is not just a strategy slide for me either. At GenY Medium I ran the backlink, keyword-architecture and internal-linking audits myself, then rebuilt the Google Merchant Center and Meta catalog feeds, structured product data that drove 16x ROAS, plus a database-driven targeting fix that lifted a B2B e-commerce client's conversion rate 36%. At Plug Power I paired customer research with a 15-plus test A/B program that tied SEM performance to MQL quality, the same hypothesis-to-experiment loop a website CRO roadmap has to run every week, not just at launch.

Reporting that survives a leadership review is the other half of this job. At Sensata I built SQL and GA4 KPI frameworks across 50K-plus connected devices to find the cohorts worth acting on, then ran the same OKR cadence and leadership decks that would need to connect your organic traffic numbers to signups and pipeline, working across Engineering, Product and Sales without owning any of their roadmaps. Sensing products and semiconductor equipment are technical B2B markets in their own right, the same buyer complexity as PropTech or InsurTech.

Your GEO charter is not a hypothetical for me either. I already run AI agents built on Claude at Applied Materials to automate the market and competitive analysis I used to do by hand, so treating an AI-driven search surface as a discovery channel worth its own strategy, not a curiosity, is already how I default. Proof trail at adhi-growth-ai.vercel.app/ref/hover.
