Hiring Team, Sigma Computing

Sigma's SE organization needs one operating rhythm that turns pipeline, headcount and capacity into a single read every week. I built exactly that kind of system at Sensata: the FY2026 Bleeders and Leakers Power BI dashboard tracked 1,200 pricing opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines, and it is what let leadership find \$433M in margin gaps and prioritize by salesperson and product line instead of guessing.

That same discipline is what I run today as founder of PriceKeel. I own the CRM and CPQ, the forecast and pipeline reviews, and every deal approval, and I built the audit trail that lets Finance check a pricing decision instead of trusting it blind. I know what it takes to be the single operational thread a fast-moving, matrixed org runs on, because I have been that thread for two different functions now.

Headcount and capacity planning is the other half of this role, and it is the same muscle I use carrying P&L and revenue targets at Applied Materials, where I also automate the repetitive parts of forecasting and market-sizing with AI agents built on Claude so the time goes to the judgment calls instead of the spreadsheet work. I have run the cross-functional hub between Sales, Engineering and Finance before; doing it for a global SE organization is the same job at a different scale.

I would like to bring that operating rhythm to Sigma's SE org. Proof trail at adhithyabhaskar.vercel.app/ref/sigma-computing.
