Hiring Team, Workstream

I built an AI hiring product from a blank page once already: SwipeHire, a job-matching platform I wrote the PRD for, scoped, and shipped to 50+ early users on my own. So when your posting said you want someone to own a product area end-to-end, from customer discovery through a shipped north-star metric, that read like a description of how I already work, not a stretch I am making to fit the req.

At Sensata I owned the product roadmap and a 100+ feature backlog for a full sensor product line, strategy through execution, working with engineering in Agile across 3 regions. I did not set that roadmap from a hunch. I ran 30+ structured interviews with OEMs and distributors to turn field pain points into testable hypotheses, then checked the results against SQL and GA4 data from 50K+ connected devices before I trusted them, work that cut time-to-market 20%, lifted CSAT 22%, and moved feature adoption 18%. That same loop, talk to the people using the product, then verify against the data before you commit engineering time, is what a product area at Workstream needs from day one.

I also know what it looks like to be resourceful when the clean answer is not available. At Pixis, an AI ad platform, I ran an 8-person team across 8 client accounts and cut churn 50% by turning account-level pain points into pragmatic fixes rather than waiting on a perfect one. And at Applied Materials now I automate repetitive analysis with AI agents built on Claude, so pairing product judgment with agentic tooling is not a habit I would be building on your roadmap, it is one I already run daily.

I would welcome 15 minutes to talk through where I could plug into req PRO01. Proof trail at adhi-product-ai.vercel.app/ref/workstream.
