Hiring Team, Amazon Web Services

Marketing the Serverless portfolio, Lambda, Lambda durable functions, Lambda MicroVMs, EventBridge and Step Functions, means translating architecture decisions into a narrative a developer trusts enough to build on. That translation work, turning something genuinely technical into a story a buyer can act on, is what I did at Sensata with a new connected-sensor product line: I worked from the engineering spec itself, not a summary of it, to build positioning that lifted conversion 15% on priority launches and drove $2M+ in first-year revenue.

Customer and competitive insight informing the plan is the half of this role I would lean into first. I ran 30+ customer interviews with OEMs and distributors before committing to a launch bet, then instrumented KPI frameworks in SQL and GA4 across 50K+ connected devices to separate real technical adoption from stalled rollout, the same signal a developer audience gives off through usage rather than survey answers. I also ran competitive analysis across 10+ players to keep positioning sharp as the market moved.

The executive-facing and cross-functional side of the role is where I already operate daily. As Pricing Lead at Sensata I presented multimillion-dollar customer quotes and revenue models directly to senior executives, and at Applied Materials I build the cross-functional bridge between Sales, Engineering and Accounts that a Serverless launch needs between product, DevRel, solutions architecture and sales.

I would welcome the chance to talk through how I would sequence a Serverless launch narrative against developer adoption data. More of this work is at adhi-product-ai.vercel.app/ref/aws.
