PITCH DECK | VERKADA SENIOR ASSOCIATE, PRICING & COMMERCIAL OPERATIONS

Your Deal Desk needs one person who balances revenue against margin, deal by deal, without slowing Sales down. I already run that discipline, for a pricing platform I built myself.

Discount governance, margin recovery and deal-desk process built to scale from multi-million-dollar global deals to small and midsize ones.

- **$700K+** margin recovered in 2 quarters, Sensata Bleeders and Leakers program
- **53% to 61%** distributor margin lift via repriced catalog logic
- **$433M** margin gaps surfaced across 1,200 pricing opportunities (Power BI)
- **PriceKeel** - founder who runs a CRM/CPQ, discount-guardrail engine and audit trail
- **Claude AI agents** automating recurring pricing analysis today

WHY THIS DECK EXISTS

The hard part of a Deal Desk is not finding the data. It is reviewing every discount exception fast enough that Sales does not stall, while still protecting gross margin.

What balancing revenue and margin at scale runs into

Deals arrive in every size at once: multi-million-dollar global accounts and small/midsize deals that still need a fast answer, so the review speed cannot change with deal size.

Discount approval, competitive-dynamics analysis and sales-incentive tracking sit with different teams, Sales, Sales Ops, Finance and Product, so a process only scales if all of them trust the same numbers.

Revenue and margin goals pull in opposite directions across products, channels, segments and geographies, so a one-size discount rule either gives away margin or loses winnable deals.

What I have already run, building this exact system

At **PriceKeel**, I run a guardrail engine that reviews every discount exception deal-by-deal against competitive dynamics, the same discount-approval mandate this team owns.

I designed the **audit trail** that gives Finance evidence for every discount decision, selling it against ad hoc approvals, the same cross-functional trust a deal desk needs from Sales, Finance and Product.

At **Sensata**, I balanced revenue against margin across 3 regions, 4 product families and 20 product lines, the same multi-segment tradeoff this role runs at Verkada's scale.

A Senior Associate who reviews discount approvals deal-by-deal, balances revenue against margin across products, channels, segments and geographies, and builds a process that scales with deal volume, is describing one connected loop. I have run that loop twice: once inside a company's pricing organization, once as the founder who had to build the tooling from scratch.

THE REQ, MAPPED

What the Senior Associate, Pricing & Commercial Operations opening asks for, and where the proof sits.

What the role covers

> *"Balance revenue vs. margin goals for the company across multiple products, channels, segments, and geographies."*

> *"Review discount approval requests and analyze competitive dynamics on a deal by deal basis to maximize gross margin."*

> *"Develop scalable processes...to manage a variety of deal types, ranging from multi-million dollar deals...to small/midsize deals."*

> *"Grow total revenue by monitoring success and engagement of sales incentives programs."*

My Proof

Balance revenue vs. margin across segments: led Sensata's Industrial BU pricing across 3 regions, 4 product families and 20 product lines, recovering $700K+ in margin in 2 quarters while still driving +12% YoY revenue.

Discount approval, competitive dynamics deal-by-deal: run PriceKeel's guardrail engine that reviews every discount exception against competitive dynamics and willingness to pay, plus the audit trail that documents the call for Finance.

Scalable process across deal sizes: built the CRM/CPQ, pricing rules and deal-approval workflow at PriceKeel, designed to hold from multi-million-dollar deals down to small ones without a bottleneck.

Sales incentives, revenue growth: partnered with executives on multimillion-dollar customer quotes and tracked win rate, pipeline stage and avg $/win on the FY2026 dashboard that informed incentive and discount decisions.

THE SENSATA PROOF, IN DEPTH

Bleeders and Leakers: find the margin leak, close it deal by deal, make the fix hold.

Built as a BU-wide Power BI system covering 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, with pipeline funnel, win rate and stage distribution by region and product line, the same deal-level depth a Deal Desk reviews at.

$433M

Margin Shortfall Surfaced

Ranked every pricing opportunity by competitive gap and customer willingness to pay so leadership could prioritize which deals and product lines to fix first, instead of chasing anecdotes.

$700K+

Margin Recovered in 2 Quarters

Closed through cross-functional negotiations with Sales and Finance built on competitive analysis, deal by deal, not an across-the-board price hike.

53% to 61%

Distributor Margin Lift

Repriced the channel logic itself inside the catalog, so the gain outlived the initial fix instead of drifting back within a quarter.

The same BU also ran a financial model flagging line items where a price change could lift profitability more than 50%, and multimillion-dollar customer quotes built alongside senior executives on the business's most strategic accounts. The common thread: every fix was traced to a specific deal or product line, and every fix was measured after it shipped.

FIRST 30 DAYS

What the first month in Pricing & Commercial Operations at Verkada looks like.

WEEK 1

Map the deal and discount surface

Pull last quarter's discount-approval requests, deal sizes and win/loss by product, channel, segment and geography. Sit with Sales, Sales Ops, Finance and Product to hear where the current approval process slows a deal down.

Why first: the leak is usually visible in the data before anyone has named it out loud. Same move that started the Bleeders and Leakers program.

WEEK 2-3

Build and pressure-test the guardrail

Set discount-approval thresholds informed by competitive dynamics and win-rate data, test them against a sample of real deals ranging from multi-million-dollar accounts to small/midsize ones, then document the rule so Finance can audit it later.

Why now: modeling against a hard target, then verifying the fix cross-functionally, is what made the 53% to 61% distributor gain stick instead of drifting back.

WEEK 4

Ship the first revenue/margin project

Pick one independent opportunity the data surfaced, a sales-incentive gap or a channel pricing leak, build the business case and start scaling it, the same self-directed move that grew into the Bleeders and Leakers program.

Why this fast: a deal desk earns trust the moment it finds money nobody asked it to find.

CLOSE

You are hiring someone to balance revenue against margin, deal by deal, at Verkada's scale. I already run that discipline for a pricing platform I built from scratch.

The core proof is Sensata: **$700K+ in margin recovered in 2 quarters**, distributor margins lifted **from 53% to 61%**, and **$433M** in margin gaps surfaced across 1,200 pricing opportunities ranked against a $627M target, all traced to specific deals and product lines.

What is harder to find is someone who has also spent the last several months building the CPQ, pricing-rules and discount-governance system a Deal Desk eventually wants internally. **I am building that at PriceKeel right now**, so the deal-by-deal rigor this role asks for is not something I would need to develop on the job.
