Hiring Team, Airwallex

Your posting asks where Airwallex should enter next in the Americas and how, before a single contract or product requirement gets written. I have done a live-fire version of that exact question: leading a 5-consultant team that sized Safran's addressable market from 170 facilities down to a SAM of 28 across 4 verticals, assessing the financial feasibility of market entry for 3 product lines, and presenting the recommendation directly to Safran leadership. The muscle is the same one your CEO Office team needs: take a market that has no clean answer yet and build the structured case for where to compete.

The harder half of this role is translating that strategy into what Product and Engineering actually build. At Sensata I owned the roadmap for new sensor products, converting market requirements into a 100+ feature backlog managed with Engineering across 3 regions, and I ran the GTM for those products across North America and Europe end to end (positioning, pricing, channel, commercial launch) to \$2M+ in first-year revenue. That is the same handoff your posting describes: turning a market-entry decision into product scope, sequencing and launch dependencies someone actually has to ship.

Executive synthesis is where I spend most of my time. I built Sensata's FY2026 Bleeders and Leakers Power BI dashboard, a \$627M pricing-opportunity pipeline tracked across 3 regions and 20 product lines, that surfaced \$433M in margin gaps and the risk behind them for leadership to prioritize by rep and product line, then recovered \$700K+ of it in two quarters. I carried that same synthesis into AP26 revenue models and site-transition strategy directly with senior executives, turning operational trade-offs into go or no-go recommendations instead of open questions.

I use AI agents built on Claude to automate the repetitive parts of my own research and analysis, with a human check before anything reaches a decision-maker, which is the same judgment your posting asks for around sourcing and verification. It is the kind of lightweight tool I would want to build for a Global Expansion team running licence mapping, competitive intelligence and status reporting across several markets at once.
