Hiring Team, LastPass

At Sensata I wrote the positioning and messaging framework that turned a line of sensing products into a buyer value story both engineers and procurement teams understood, and it drove $2M+ in first-year revenue plus a 30% rep win-rate lift once the field had the battlecards and case studies that came with it. That is the muscle this role is built around: own positioning and messaging, then prove it holds up when a seller is in a contested deal.

I built those battlecards myself, running competitive intelligence across EMEA and the US that turned purchasing patterns and competitor share into win/loss signal rather than a slide nobody opens again. I did the cross-functional work without a reporting line into Product or Sales to make it happen: 30+ customer interviews with OEM and distributor buyers fed straight into roadmap prioritization, and every launch's GTM plan moved through Product, Sales and Brand before it ever reached a rep's hands. That is the same three-way coordination your Product Marketing team runs, just inside sensing hardware instead of identity and access.

At Applied Materials I now turn multi-product-group market sizing into one view that Sales, Engineering and Accounts act on directly, and I run AI agents built on Claude to clear the repetitive analysis work so more time goes into the story itself. Customer and market research is the discipline underneath both roles: find the insight that sharpens positioning, then make sure a seller can repeat it in a room.

Positioning complex technical capabilities for a technical buyer and a business decision-maker at the same time is the hard part of this role, and it is where I have spent the last two years, first in sensing hardware and now in semiconductor equipment. I would welcome the chance to talk through how the Sensata launch motion and the Applied Materials market-sizing work map onto your product portfolio. Proof trail at adhi-product.vercel.app/ref/lastpass.
