Hiring Team, Visa

A 5-consultant team I led at Safran once had to turn 170 facilities across aerospace, defense, healthcare and scientific research into a single, defensible SAM of 28, with a distinct value proposition and positioning built for each vertical before we presented the market-entry case to Safran's leadership. That is the same shape of problem your Global Cross Border team is solving at a much larger scale: one strategy team, five regions, and a growth pillar that has to work differently for expats in Madrid than for students in Tokyo.

The muscle I would bring to it comes from Sensata, where I benchmarked 10+ competitors across EMEA and the US and turned that competitive read into pricing and go-to-market decisions that drove +12% YoY revenue and +8% market share. I also built the FY2026 Bleeders and Leakers Power BI dashboard, ranking 1,200 pricing opportunities against a \$627M target across 3 regions and 4 product families, so leadership could see exactly where the case for action was strongest instead of chasing it region by region. At Applied Materials now, I run the same discipline for semiconductor markets: partnering with Sales, Engineering and Accounts to turn scattered field input into one market view that carries investment-prioritization decisions, with recurring analysis automated through Claude AI agents so more time goes into the strategy itself.

What draws me to this specific opening is that Visa Destinations reads like the next stage of a problem I already know: building out new destinations (Madrid, Tokyo, Egypt) alongside the playbook for the ones that already work (Paris, New York) is the same market-prioritization-plus-persona work I ran at Safran, just with a live global platform and a much bigger growth mandate behind it. I bring market sizing, competitive intelligence and a habit of turning hypotheses into a business case leadership can act on, from inside two very different global industries.
